Introduction:

Man fears Time, yet Time fears the Pyramids – an Arab proverb

Pyramids have been incredibly important to humanity for over 10,000 years. There are examples in almost every place where humans live or lived in the past. So, why expend the incredible amount of energy required to build such structures?

Were they for religious purposes?
Were they to prove how powerful a king or ruler was?
Were they to preserve (mummify) mammals placed within the pyramid?
Were they to observe the procession of the equinoxes?
Were they to show off math skills?
Were they to communicate with the "gods"?
Were they used for generating power?

Because the original builders of the famous pyramids of the world are all long turned to dust we can't ask these questions, however scientific research conducted in Russia over the last ten years is shedding new light on why the ancients were so interested in building these magnificent structures.

And it comes down to one simple thing, energy. Prana, Chi, Orgone, Source Field, Torsion, etc. it has been called many things over the years but it appears that the specific shape of the pyramid has very specific results in energetic terms. This, in some form or another, was undoubtedly why people have for the last 10,000 years and right up till today been building pyramids.

Scientists and interested amateurs have performed experiments with plants, seeds, metals, food and liquids inside pyramids. Bill Schul and Ed Pettit placed identical containers of milk inside and outside a pyramid. Within a week the milk outside grew mold, whereas the milk inside the pyramid formed curds, and six

weeks later turned into a smooth creamy yogurt. An experimenter named James Raymond Wolfe put a pint of water within a pyramid for a week and a control pint outside the pyramid. His assistant filled numbered vials with the resulting water and Wolfe watered groups of sunflower seeds, not knowing which water was which. In every case the seeds watered with the pyramid-charged water grew faster. Dr. Patrick Flanagan also verified that seeds germinated more easily and plant growth was accelerated by pyramid power. Seeds kept beneath a pyramid will produce a richer yield, and pulses sprouted with pyramid power are richer in vitamins, minerals and enzymes. Not only do plants grow faster beneath pyramids but they remain free of pests.

THE SECRET POWER OF PYRAMIDS
ASTONISHING NEW DISCOVERIES ABOUT PYRAMIDS AND HOW THEY CAN CHANGE YOUR LIFE
BILL SCHUL and ED PETTIT

Bill Schul and Ed Pettit noted significant difference in the growth rate of plants beneath pyramids and wondered if they would be able to capture it with time-lapse photography. What their photography showed was "plants gyrating in a symphonic dance as though orchestrated by an unseen conductor." Their first film showed a six-inch-tall sunflower placed in a glass pyramid at the one-third height level. "The plant followed an east-west cyclic movement. It bowed to the east nearly touching the base, swept a semicircle to the south and back to the west and finally straightened to the vertical before starting the dance once more. The movement was repeated every two hours ...." The authors observed this east-west movement for two years, then abruptly the plants started to move instead in a north-south arc, presumably due to some change in the environment or atmosphere.

An aluminum screen placed to the west of the plants would stop the plants' gyrations, since aluminum blocks a pyramid's energy field. Similarly, seeds placed on aluminum foil in a pyramid will sprout slowly - but aluminum's blocking effect is overcome if the foil is left in a pyramid for two weeks or more. Amazingly, the foil then carries its own pyramid energy and it will enhance seed growth and cook food faster.

Jules Green of the Psychical Research Society experimented with flowers. Taking four roses, he placed two under pyramids, one under a cube, and one in

the open air. He did the same with four tulips. After a week, the flowers exposed to the air had withered, while the others were still fresh. The roses and tulips in the pyramids, however, had actually grown.

Dr. Patrick Flanagan investigated pyramid effects on plants, water, animals and people.

Medicines stay fresh beneath a pyramid for the same reason: destructive energies are deflected and positive energy is enhanced. Pyramid-charged water is energizing and aids digestion; it also helps wounds and skin conditions to heal faster. A small pyramid placed over a wound will likewise speed healing. Polluted water can be in several days beneath a pyramid.

Since a pyramid holds positive energy and deflects negative wavelengths, it will cleanse and empower crystals, and brighten tarnished jewelry. Tarnish can be removed quickly from gold and silver by pyramid-treated water.

Many people report feeling revitalized, with sense-perceptions sharpened, after spending time within a pyramid. As well, some experience an internal tingling, and sometimes a "distant ringing" sound, as the pyramid shape focuses and resonates beneficial sound vibrations.

In The Secret Power of Pyramids, Bill Schul and Ed Pettit report that people spending time sitting beneath pyramids have claimed relief from many ailments. In their chapter on "Healing Powers" they report that healing has occurred rapidly in cases of sprains, cuts, bruises, toothache, backache, strains, congestion, and infections. They mention that people sitting within pyramids sometimes report seeing a blue light, which research has shown to have cooling, healing properties. In Pyramid Power, Max Toth and Greg Nielsen state

that people sitting or sleeping near even a model pyramid have reported the alleviation or disappearance of pain or symptoms of illness. Schul and Pettit postulate that the pyramid energy field tends to produce healthier functioning of cells, tissues, and organs. They point out that since the pyramid shape offers a heightened energy field, while a cube inhibits energy, it does not serve us to live in cube-shaped homes.

Not surprisingly, people experience enhanced effects when meditating beneath pyramids. Changes in the mediator's aura (electromagnetic field) have been noted with Kirlian photography - auras become brighter and larger. Meditators report deeper relaxation, an enhanced sense of well-being, and increased levels of awareness. The positive energy flow in the pyramid facilitates deeper focus.

Dr. Patrick Flanagan tested the brain waves of people as a pyramid was lowered over their heads. Their alpha waves became much stronger and meditation became deeper. As well, he found that he required less sleep and felt more rested when sleeping under a pyramid. The Great Pyramid Company, which sells pyramids for meditation and sleep, states that sleeping under, rather than inside, a pyramid is preferable, since "the energy is softer and quieter." Having a pyramid beneath one's bed can also have a calming effect.

A pyramid aids meditation because it focuses harmonious energy while deflecting distracting energies:

Bill Schul and Ed Pettit researched the effects of meditation inside a pyramid, by asking people to try it for the first time and describe their experiences. The common feelings were of calmness, peace, harmony and relaxation, as well as mild euphoria, feelings of being "charged" with renewed energy, and a sense of detachment from the physical world and everyday concerns. Some experimenters experienced a focus of energy on their heart. One reported: "The first impression was peaceful silence ... and I was very aware of my heart. There was a power of some kind going to the heart, or coming from the heart. The entire body seemed to take on a vibration - a tingle..."

Sophisticated biofeedback equipment shows that a trained meditator (or anyone trained to control his brainwave pattern) is influenced by the lowering of an open-structured pyramid over his head. Experiments carried out by Kerrell and Goggin used experienced meditators who were wired up to an electroencephalograph machine, which measures the patterns of waves produced by the brain. The subjects were blindfolded and the baseline of the brain waves recorded.

Then, unknown to them, a pyramid was lowered over them. After about 30-45 seconds the alpha the theta waves in the brain increased in frequency and were more than double the normal amplitude. Sometimes the alpha activity (the brainwave so sought after by the bio feedback experts) was so great that it shot off the top of the recording scale. The subjects themselves noticed subjective difference when they were under the pyramid. Most frequently reported sensations were: a sense of weightlessness, tingling, warmth, tranquillity and relaxation, dreams, graphic visions and time distortions. A few subjects experienced even more extraordinary phenomena including clairaudient experiences.

Other experiments have shown that people sleeping with a pyramid over their heads need fewer hours sleep and that they awake considerably more refreshed. Kerrell and Goggin have carried out pyramid tests with children who they reasoned, would be far more reliable witnesses than adults who are conditioned to reject or at least be skeptical of new phenomena.

They took children (who knew nothing about pyramids, fairly obviously) and on a very casual basis gave them the opportunity of going on or out of one place on the ground in their own back gardens.

When the children were inside they were asked very casually if they'd like to stay in there and what if anything it felt like. Only five of the eighteen children tested, noticed no change at all. Many felt `warm all over', body tingling and other sensations. One hyperactive child in particular was very much happier under the pyramid and was able to stay calm and read school-books for longer than ever before.

People meditating in a pyramid regularly have received strong spiritual and psychic impressions, as well as enhanced dreams and visions, vivid visual imagery, and increased psi and psychic activity.

Pyramid Experiments YOU can Try

The There are several important things to keep in mind when experimenting with Pyramids. First, the object you are treating **should NOT exceed 5% of the pyramid's volume**. Otherwise the energy is spread to thin, and not much happens. The exception is when sitting or sleeping under a pyramid. For this, a pyramid with a 6 ft base (or larger) works very well.

Second, and this is crucial, the pyramid MUST be aligned to magnetic north to work! Also if you are using a pyramid over your plant to boost your plant's

growth you do need to be careful. Just as too much fertilizer is bad for plants, too much pyramid energy is too. Some plants don't mind it, but others can't take a lot. If a plant is getting too much it will start to wilt. There are several ways to regulate the energy. The best way to prevent over-dose on plants is to treat water with Pyramids and water them with the pyramid water. You can't over dose them doing that.

Water Alteration

Water is not "purified" under a pyramid, as the claims say, however it is chemically altered. Water is a polar molecule. The hydrogen bond is what allows this change to occur. The as yet undefined energy (though Wilhelm Reich called it Orgone) produced by the pyramid polarizes, lines up, or somehow alters the hydrogen bond. This alters not only the taste of the water but some of it's chemical properties as well. Water that is "charged" with pyramid/orgone energy can pass on the energy to other things.

Watering plants with pyramid water will help them grow better. Some people drink pyramid water too. If you would like to made lots of pyramid water to drink, put a gallon or less of water under a large frame pyramid (6ft base) and leave it for a hour. Treating small amounts of water under a small or large pyramid, takes only 10 to 15 minutes though 12 days is optimum.

Sharpen razor blades

This sounds really strange, but it's true. A dull razor blade is impregnated with water molecules. Now a pyramid creates a condition of microwave-dehydration (on non-living things), and removes the water from the steel. The moon cycles

can affect results, as the moon cycles affect earth's magnetic field, and pyramid energy is related to magnetism (that's why you have to have the pyramid lined up to magnetic north. The blade sharpens best when it is lined up east-west, and the pyramid north-south. The razor is put under the pyramid after each use. A cheap razor that lasts 5 good shaves will last 50 or more. I have heard reports of as high as 250 as well. With the lunar cycles affecting the pyramid, sometimes one will get a poor shave one night. Don't end the experiment, it will pick up again the next day. Now this is not a totally alien process, it just speeds up natural ones. If you leave a razor for 2 months it will lose the water, and "sharpen" itself. The pyramid does this over night. Pyramids will keep the blade sharp, but I think it takes a long time to sharpen a dull one. Try 2 weeks and see it helps. It's best to start with a fresh blade and maintain it. Using good quality razors and pyramids together can help a razor last for many, many uses.

Restore the luster to tarnished jewelry and coins
Pyramid energy will loosen tarnish off coins and jewelry. Leave the object under the pyramid for several days first. Then the tarnish will rub off very easily. This is likely due to the microwave-dehydration breaking the tarnish's hold loose.

Mummify and dehydrate meat, eggs and other food stuffs
This is a most interesting effect of pyramid energy, and is due to the microwave dehydration. Meat, and other types of food will dry out quickly under a pyramid. For this type of experiment the samples should be sealed, unless using a frame pyramid. Other-wise the pyramid creating a closed space will affect results. The Egyptians had a very effective way of mummifying their dead, I believe this is how they did it.

Help keep milk fresh and prevent souring without refrigeration
Milk will stay fresh longer under a pyramid without refrigeration. This is because the micro-organisms that make the milk spoil cannot withstand the high energy.

Dehydrate flowers without losing their form or color
The microwave-dehydration accelerates the drying process of the flowers faster than normal. I would recommend using a large frame pyramid for this, as the enclosure of a solid pyramid might counter act the effect. Also because of the 5% rule.

Increase the growth rate of plants
Pyramid energy is good for plants, in moderation. But too much can be harmful to some plants. Some can take more than others. The best way to prevent over-dose in plants is to water them with treated water.

Help attain increased relaxation
Pyramid energy puts the mind into a alpha-theta state which is one of relaxation. Animals quiet down under pyramids as well.

Improves the taste of coffee, wine and certain fruit juices
Pyramid energy alters the hydrogen bond in water. A general effect is a increase in the "smoothness" of a drink. It takes the sharp "edge" of drinks like coffee. Works well with wine too.

General healing
Promotes healing of cuts, bruises and burns, as well as reduces pain from toothaches and headaches
The title says it all. In general pyramid energy is good for multi-cellular organism. It is harmful to micro-organisms, which is good for killing infections and what not. I have also read that you don't get colds and the flu if sleeping under a pyramid.

Sleeping/Sitting Under a Pyramid

Having a small pyramid in the room where you sleep can have positive effects. Sleeping under a large pyramid has several benefits. First less sleep is needed. Also you will have vivid lucid dreams and because micro-organism are repelled or neutralized by pyramid/orgone energy you will be sick less often. Remember the preservation of foods noted by all pyramid researchers? Some people meditate under a pyramid as pyramid energy puts your mind into a theta-alpha state. This also what causes the lucid dreams, and puts the mind in a creative mood when you are awake. I have heard that some people study under a pyramid for this reason.

You Can Build Your Own Russian Pyramid at Home

Good news! You can build one too! Who knows what you will discover, what changes will be brought about to you and your environment but one thing is for sure; having a pyramid in or near your home is a very good thing indeed! So, after a quick overview of the greatest pyramid of them all near Giza Egypt we will look at modern research and the new Russian Pyramids that are being built all over the world as we speak. From there we will give you exact, step-by-step details on not only how to build and "operate" your own Russian pyramid but on how to prepare and prepare yourself for the changes predicted by top psychics (including Cayce and Nostradamus) and many "primitive" cultures.

Chapter 1: A Brief History of the Pyramid

Giza: The Greatest Pyramid of All

...And he built his pyramid beside the temple of this goddess and he built a pyramid for the King's daughter Henutsen beside this temple...

~ From the Inventory Stela discovered by Auguste Mariette in1853

Deep in the sand near modern day Cairo sits the great pyramid of Giza. Thought to have been built or at least restored by the Pharaoh Khufu between 2590 and 2567 B.C. It is one of the most impressive and mysterious thing ever created by humans. Was it an observatory, a funeral crypt or something even more?

The so called "Great Pyramid" at Giza is also variously called the Pyramid of Khufu and the Pyramid of Cheops is the oldest and largest three stone pyramids at Giza. It is also recognized as the oldest of the original Seven Wonders of the World, and the only one still intact today.

But before we go on, lets look at some Pyramid Basics

- The Great Pyramid at Giza is the largest stone building on earth, measuring 13 acres in area at the base it stands 481ft high (40 stories high) and contains 2.3 million blocks each weighing 2.5 – 70tons.

- The Great Pyramids position is the exact center of the earth's landmass.

- The north-south at which is 31 degree 9′ east of Greenwich is the longest meridian and the east-west axis, 29 degree 58′ 51′ north is the longest land parallel.

- The weight of the Great Pyramid is one thousand trillionth of the weight of the Earth and enables us to calculate the distance of the earth from the sun.

- The bedrock under the pyramid was leveled to plus/minus 1/2 an inch over the whole 13 acre site. The pyramid is located on the exact center of the land

mass of Earth and sits on Earth's longest land meridian. It is aligned within 0.06% of rotational true north. The chances of all this being accidental are 1 in 3 billion.

- Stones used in the building of the pyramid show obvious and very noticeable machining marks.
  - Why is there no mention of this in the hieroglyphs?
  - How were these ancient stone cutting tools powered?
  - Did the ancient Egyptians use electricity?

- The original pyramid was covered with 115,000 limestone blocks up to 8ft thick this type of limestone becomes whiter with age so originally the pyramid would be shining and bright these blinding white casing stones over 8ft thick and yet were never more than a fingernails width the original surface was measured to be flat to within 1/50th of an inch.

- The Great Pyramid is aligned so exactly to the true north that it defied modern measuring systems until very recently. It was thought that the pyramid was slightly off this north-south axis, but with the development of more sophisticated measuring methods, it was realized that the ancient Egyptians had got it right and that we had been wrong.

- Why create something this size to an almost to optical level of refinement?

- Interestingly the great pyramid very accurately encodes the size of the earth. Its height above bedrock, including the socel, is exactly 1/43200 of the polar radius down to satellite precision. Also, in 2 seconds precisely, the earth has turned a distance exactly equal to that around the base of the great pyramid.

- How were these casing stones cemented together with unknown cement not replicated even available today that cures to be even stronger than the native limestone?

- Why was this massively precise stone surface originally inscribed with hieroglyphic symbols in long rows at the base but none inside? Yet these are the only known glyphs in the pyramid. Why?

- The "sarcophagus" (seraphim) weighs 85tons, has a 55ton lid and was machined with unknown technology that is still unparalleled today.

- The seraphim doesn't fit through the entrance, therefor it was inside during the construction of the pyramid.

- The King and Queen's chamber have shafts going to the outside that cut through the massive stones of the pyramid at incredibly specific angles

- The shafts are accurate to 1/4 inch over 300ft and the walls are constant within 1/16th of an inch.

- The descending passage is accurate to 20/100ths of an inch and aligned to 1/4inch over 350ft.

- Earth is exactly 500,000,000 pyramid inches pole to pole and the Egyptians used this as the basis for their measuring system

- Stones pyramid elements left lying about in the desert near Giza are machined to an almost unheard of level of precision, yet why go to all that trouble if they are to be left lying around?

- Basalt paving stones near the base of the pyramid show saw marks consistent with modern stone cutting methods

- No records of the tools used to create the great pyramids exist in either the Egyptian or modern history. Therefor the construction must have taken place either earlier or with external assistance.

- Stones found near Abu Rawash show cuts on a radius only possible with modern machining techniques

- Drill holes in solid granite blocks at the temple of Abu Garab show machining marks consistent with a uni-directional rotary diamond drilling as pointed out by a practicing machinist.

- Alabaster star shaped altar at Abu Rawash shows tool marks and couldn't be created by the use of hammering tools due to the type of rock. In fact quartz crystals embedded in the altar have been cut in half.

- How come there is no record of any king actually being buried in the pyramid?

- Why are there are no marks, painting or hieroglyphs inside the Great pyramid?

- Why are modern Egyptian scholars so loath to question the official story that it was built as a burial rather than for other more interesting purposes?

Rotary Cutting Tool Marks on Star Altar

How Were the Pyramids Built?

Most classical Egyptologists continue to tell us that the pyramid of Giza was built as a tomb for The Pharaoh Khufu (Cheops to the Greeks). Taking some 20 years to build and "employing" over 100,000 people, it was finally completed around 2560 BC.

When the pyramid was first completed it was covered in white marble and stood 480.6ft in height. For over 3,800 years the Great Pyramid was the tallest man-made structure in the world. Over the years the original smooth facing stones

have been removed and what is seen today is the underlying core structure.

There have been varying scientific and alternative theories regarding how Khufu's pyramid was constructed. The most widely held belief is that it was built by moving huge stones from a quarry and dragging and lifting them into place. However there are those who have what appears to be evidence that other technologies may have been used.

These methods may have been extra-terrestrial in origin or simply lost to modern humans, though the builder of the Coral Castle near Homestead, Florida seems to have reclaimed at least some of this lost knowledge.

The builder, an eccentric Latvian immigrant named Edward Leedskalnin, claimed to have understanding of the secrets employed by the Egyptians. His claims have yet to be disproved, as the Coral Castle has stones weighing over 30 tons and he moved them alone under the cover of darkness not once but many times.

The first ancient European description of the Great Pyramids comes from Diodorus Siculus in 60 BC. After his visit he wrote that the Pyramid stood 'complete and without the least decay, and yet it lacked its apex stone'.

Then in 1938 AD Prof. John Greaves an intrepid 36-year-old Oxford mathematician and astronomer notes after the first modern exploration that "The structure of it hath been the labor of an exquisite hand, as appears by the smoothness and evenness of the work, and by the close knitting of the joints."

During the course of his research he made a number of discoveries, most importantly the two 'ducts' in the kings chamber (which showed evidence of the use of torches). He also noticed that the bottom of the Grand Gallery, a block had been removed and a passage had been excavated down into the pyramid.

This was what earlier explorers had called the "Well Shaft". Upon discovering the vertical shaft Greaves lowered himself down about 60 feet into a small chamber. The shaft continued to descend but was absolutely dark and the air was too foul to continue.

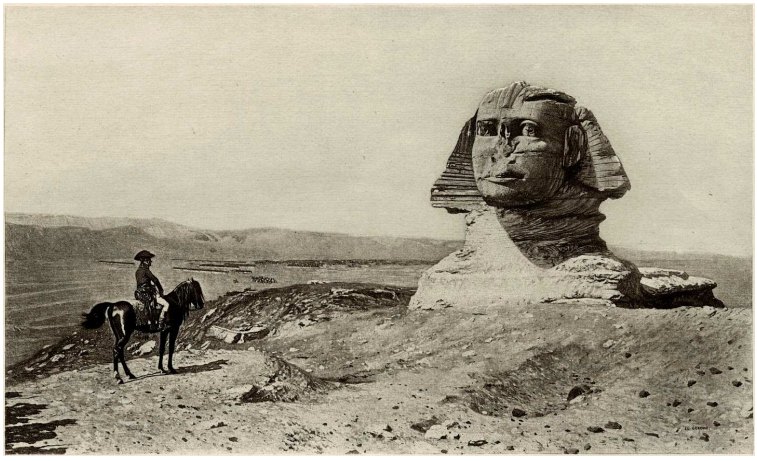
He published his investigations under the title, 'Pyramidographia: A Description of the Pyramids in Egypt in 1646'. This was the first book ever published on the Great Pyramid alone.

Professor Greaves also described the other pyramids in the Khufu Complex as being 'smooth, and equal, the whole fabric (except where it is exposed to the south) seeming very entire, free of any deformed ruptures, or breaches'.

Following a number of other expeditions a British Consul by the name of Nathaniel Davison pushed exploration deeper into the pyramid in 1763 AD.

First he, lowered a lamp into the vertical section of the Well Shaft, but found it blocked by debris. He then went on to discover a chamber about 3 feet high but as wide and as long as the Kings chamber beneath the floor of which consisted of the tops of 9 rough hewn granite slabs each weighing up to 70 tons. In fact, these Herculean blocks actually form the ceiling of the King's Chamber.

He also observed that the ceiling of this chamber was similarly constructed of huge granite slabs, now referred to as "Davison's Chamber". His measurements also confirmed the fact that the pyramid was constructed so that its sides faced the cardinal points of the compass.



Then between 1799 and 1801 Napoleon undertook a flawed but very aggressive archaeological, engineering, and astronomical expedition. The main outcome of which was is that through trigonometrical survey his men found the original

corners of the pyramid and observed that "It is very remarkable that the opening of pyramids are all to the north. The passages seemed fitted for an observatory".

1837 AD - Colonel Howard Vyse and J. Perring.

Vyse re-opened the entry made by Al Mamoun early in the ninth century AD. He also rediscovered the corner-sockets previously uncovered by the French in 1799. He discovered two of the original polished limestone casing stones and also discovered and opened up the air shafts to the King's Chamber. He learnt that these shafts extended over 200 feet to the outside of the pyramid. Once opened, an immediate rush of cool air entered the King's Chamber and maintained an even temperature of 68 degrees regardless of the weather outside. This fact is very interesting in as it points to the natural energy fields at work in the design of the pyramid.

1992 AD - Rudolf Gantenbrink.

After cleaning the Kings chamber star-shafts in May 1992. Ganternbrink and his team using a sophisticated remote control vehicle explored the southern shaft to the end and confirmed that it reached nearly to the outer skin of the pyramid and ends at a stone 'door' with two copper fittings. Could this be an indication for the use of the pyramid as an actual power generator as some modern researchers are now suggesting?

Gantenbrink tells us that the angle of the shafts could be measured by drawing a line between the beginning and end, and even though there are bends in the shaft the overall angle is extremely precise. During the robotic exploration a laser measuring device was used and no differences in the width of the shafts of greater than 0.5cm was observed.

This is again an almost unheard of level of engineering for the times and would be a challenge for engineers and builders today.

The question most ask is why?

Why this level of sophistication in building a "tomb"?

Then again was it a tomb at all?

There is compelling evidence that it in fact was NOT a tomb.

Here are some of the inconsistencies that are well known.

Remember the ancient Egyptians are well known for recording almost everything in amazing hieroglyphics. So, why is it that in the Great Pyramid there are none. In all the ancient rock carvings there are no existing records that attribute the Great Pyramid to a specific pharaoh or anyone else for that matter. There is no inscribed record of when it was originally built, why was it constructed or what its purpose was. There are no marks, glyphs or other markings cut into the stone of the Great Pyramid. There is only one recorded mark found and this was "discovered" by Sir Howard Vyse in 1837 above the Kings Chamber. However this area was inaccessible until the British explorer blew open an access to it with explosives. This mark attributed the building of the pyramid to Khufu but because it consisted pigment only it is considered highly suspect. The painted symbols -- normally paint is only used over top of carved symbols -- were completely out of the norm for how and where Egyptian hieroglyphics were normally done. Therefore, we can take Vyse's claim that Khufu built the Great Pyramid with a rather large grain of sand, I mean salt.

Also of note is the fact that there is no artistic expression used in the creation of the pyramid. In fact, noted Egyptologist Alan Alford says, "the builders of the Great Pyramid seem to have been concerned only with accuracy and stark functionality." When the pyramid was first described from the earliest times nothing was found inside the pyramid, which related it to any pharaoh. This is normally attributed to looting very soon after the pyramid was constructed however, even the sarcophagus bears no resemblance to any coffin found containing a pharaoh or other high ranking Egyptian.

Consider that the accuracy and the precision used in the construction of the Great Pyramid at the level of single blocks, and as a whole, are without precedent even today. Even in today engineers are at a loss as to how these "primitive" workers and overseers managed to build this amazing building. At the most basic level, the tools proven to be needed by modern machinists, for cutting the stone and positioning the blocks have never been found or even

mentioned in any know ancient records. The precise cutting of the types of extremely hard granite, including incredibly precise compound interior surfaces, require, massive complex, powered machinery using high pressure abrasive, diamond or even laser cutting tools. The lifting and sub-centimeter positioning of granite blocks as heavy as 80 tons to heights over 300 feet above the ground would need cranes larger than almost any in existence today and are also not mentioned. The idea of doing it with people, ropes and levers no matter how many people are available is simply not tenable.

The whole pyramid structure is so accurately placed in geographic, stellar and horizontal space that modern, satellite based, surveying, optical equipment would seem to be an absolute necessity. Many of the mortar joints including the ones used between the stones of the Kings Chamber and Great Gallery are tight enough to be watertight. A unknown type of mortar was used which has a higher hardness than the stones it joined. Modern analysis of this mortar still can not explain how it was made or how to duplicate it.

The whole pyramid complex has the look of an industrial application rather than an artistic one. This is in stark contrast with other pyramids, which use much softer rock and are much more worn down by the passage of time. The type of granite used in the Great Pyramid including the sarcophagus was different from other pyramids and many stones were cut from this exceptionally hard granite.

So when we view the reason for the original builders of the pyramids we must ask if they fit the saying that, "form follows function". Any engineered system must be built and assembled in so that it will fulfil the functions it was designed for, therefore any variation, to save money, as an example, will result in failure.

Based on the available evidence most clear thinking, unbiased researchers agree that the Great Pyramid was NOT built as a tomb, so if not a mausoleum, they what?

That is the intriguing question we will explore in the next chapter.

Chapter 2: Pyramid Construction

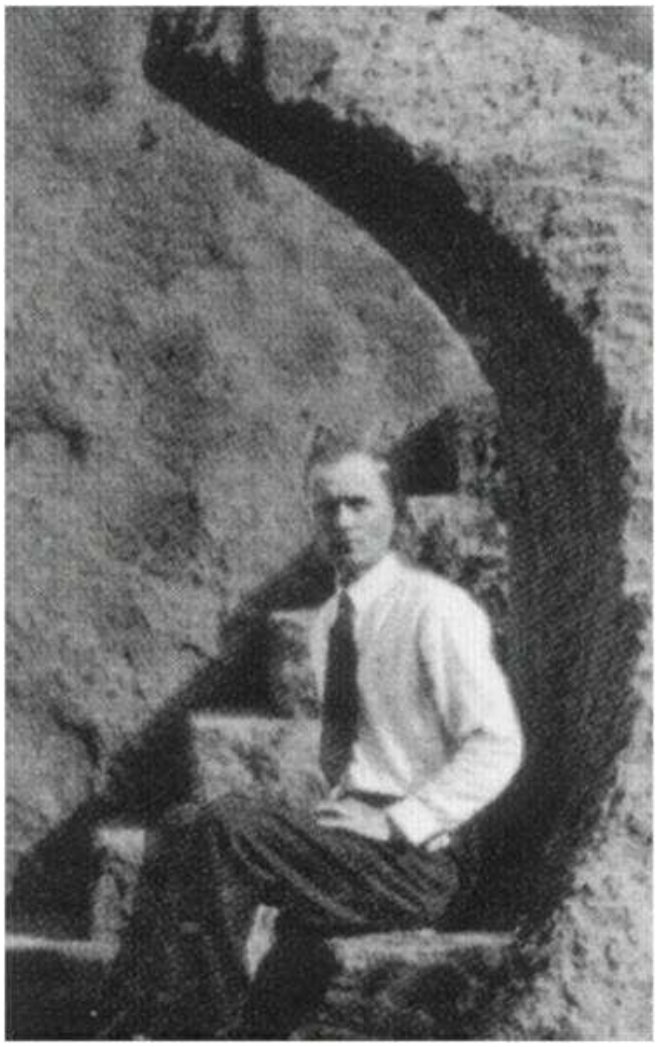
The Mystery of Moving Massive Monoliths

While the cutting techniques used to shape the extremely hard granite used by the ancient pyramid builders have been a continuing topic for debate, they have not received the same attention and controversy as the various proposed methods that were used to lift and transport the huge blocks of stone.

Egyptologists and orthodox archeologists and "experts" in primitive methods argue that the huge blocks were moved and put into place using only man power, rollers, natural fiber rope and wooden scaffolding, meanwhile, experts in moving the heaviest weights using modern methods remain unconvinced.

A construction company working nearby recently installed a hydraulic press that weighed 65 tons. In order to lift it and drop it through the roof, they had to bring in a special crane. The crane was brought to the site in pieces in 15 semi trailers. Moving and assembling just the crane from 80 miles away took over five days.

As the press was lowered into its specially prepared pit, one of the riggers was asked about the heaviest weight he had ever lifted. He claimed that it was a 110-ton nuclear power plant vessel. When it was related to him how the primitive Egyptians moved 70 and 200 ton blocks of stone inside the Great Pyramid, he expressed amazement and total disbelief. And said, there is no way the primitive methods that are promoted by Egyptologists could do that.
To date there is only one man who seems to understand and even used methods that may have been more common knowledge when the Great pyramid, Stonehenge and Matchu Pichu were built. He is the sole builder of the Coral Castle in Homestead Florida named Edward Leedskalnin.



Coming to the United States as an uneducated immigrant, Leedskalnin went on to quarry, lift and maneuver blocks of coral weighing up to 30 tons each all by himself, at night and completely unseen. Though there are reports of children seeing him moving rocks around like they were helium balloons.

Using his closely guarded secret, he was able to quarry and construct an entire complex of monolithic blocks of coral in an arrangement that reflected his own unique beliefs. On average, the weight of a single block used in the Coral Castle was greater than those used to build the Great Pyramid. He labored by himself for 28 years to complete the work, which consisted of a total of 1,100 tons of rock.

What was Leedskalnin's secret? Is it possible for a five-foot tall, 110 pound man to accomplish such a feat without knowing techniques that are uncommon to our contemporary understanding of physics and mechanics?

Leedskalnin had his own ideas about astronomy and astrology. As well as a "grid" that ran underground through the earth. Was he using geomagnetic energy when he built the walls of his castle, out of coral blocks weighing approximately 15 tons each? Was he using magnetic resonance to erect a 22-ton obelisk? What about the 22-ton moon block, a 23-ton Jupiter block, and 26 ton Saturn block? Not to mention a 9-ton gate so perfectly balanced it can be opened with a single fingers pressure, a 3-ton rocking chair, and huge 30-ton block, which he considered to be his major achievement. This monolith was crowned with a gable shaped rock. Remember he did this all at night, alone and

working with very simple tools. In fact, these personal accomplishments have astounded and confounded engineers and scientists, who compared them with weights being moved by huge industrial machines.

As word of his feats of construction and engineering spread, Leedskalnin received attention not only from engineers, but from the U.S. government, who paid him a visit hoping to be pry his secrets out of him. Leedskalnin received them gracefully, showed them around and told them nothing. In 1952, fell and while in hospital slipped away from this life, taking his secret with him. Was there a connection to his death and the visitation of the government officials? We may never know but we can "follow" the trail and see if it goes down a rabbit hole.

If we assume that Leedskalnin and the ancient pyramid builders were using similar techniques, it puts a whole different light on the requirements in man hours necessary to construct the Great Pyramid. Some estimates of the number of workers who built the Great Pyramid range between 20,000 and 100,000. Even though looking at those numbers we can easily see that there simply isn't enough room to have that many people working at the same time, even if they could all help lift a block.

It should be noted that the precision to which Leedskalnin worked his coral was not the same as that of the pyramid builders stonework, however based on the abilities of this one man, quarrying and erecting a total of 1,100 tons of rock over a time span of 28 years, the 5,273,834 tons of stone used in the Great Pyramid could have been quarried and put in place by only 4,794 workers. Then if we make some allowances for efficiencies gained from teamwork, the division of labor, and we can further reduce the number of workers and/or shorten the time needed to do it. Let's not forget Mr. Merle Booker who estimated that by using modern quarrying and transport techniques it would take over 27 years to even produce the rock used in the great pyramid!

Leedskalnin took issue with modern science's understanding of nature. He flatly stated that they are wrong. His concept of nature was simply this: All matter consists of individual magnets and it is the movement of these magnets within materials and through space that produces measurable phenomena, i.e., magnetism and electricity.

When analyzing ancient engineering feats, and faced with explaining technically difficult tasks, Egyptologists and archaeologists typically throw in more time and more people using primitive, simple tools and manpower. Unlike conventional arguments regarding ancient civilizations, in the case of Ed Leedskalnin, we cannot impose the view that the work was done employing masses of people, for it is well documented that Leedskalnin worked alone.

So, what if there's no such thing as gravity? What if, as Leedskalnin claims, all matter consists of individual magnets, wouldn't the known properties of a magnet be sufficient? We know that matching north magnet poles repel and using north south magnetic poles attract. We also know that we can levitate one magnet above another as long as the opposite poles are kept from flipping around and attracting each other. Therefore, a mag-lev train, like the bullet train in Japan is a good example of an anti-gravity device.

If a large magnet is suspended over a smaller magnet, depending on the ratio between them, the distance between the magnets would be diminished to the point that the smaller magnet wouldn't be able to exert enough force to elevate it. The earth, being the largest magnet, issues forth streams of magnetic energy which follow lines of force that have been noted for centuries. Here it is interesting to note that Leedskalnin at one point stopped construction of his castle and moved the entire thing across town claiming that the "lines" had changed position.

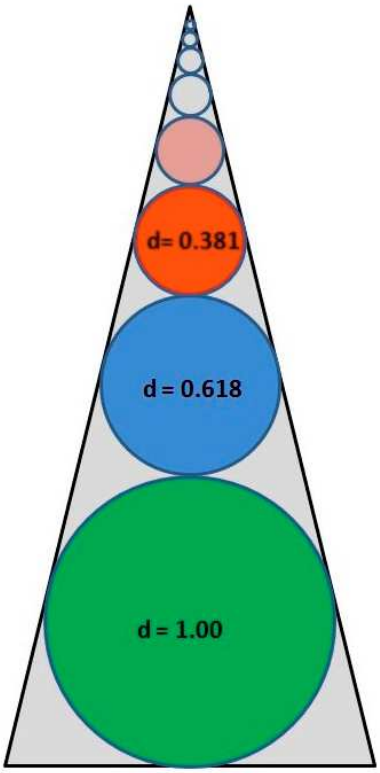
If we assume, as Leedskalnin did, that all objects consist of individual magnets, we can also assume that an attraction exists between these objects. Could it be that Leedskalnin's means of working with the Earth's magnetic pull was nothing more complicated than devising a means of aligning the "magnets" in his coral block to repel the stream of magnetic force he claimed issued from the Earth thus levitating 30 ton blocks of stone?

One method for creating magnetism in iron is to align it with the Earth's magnetic field and strike the bar with a hammer. The ensuing vibrations allow the atoms in the iron to be influenced by the magnetic field around them. The result is, after some banging on the iron if all goes well you end up with a weak but noticeable magnet.

Was this the method that Leedskalnin was using? Or was it something more advanced? Unfortunately as both the Egyptians and Ledskalnin are have now gone back to the source, we may have to look a bit harder for the answer to how the pyramids were built and why.

Chapter 3: Golden Pyramid Math

Basic Pyramid Math

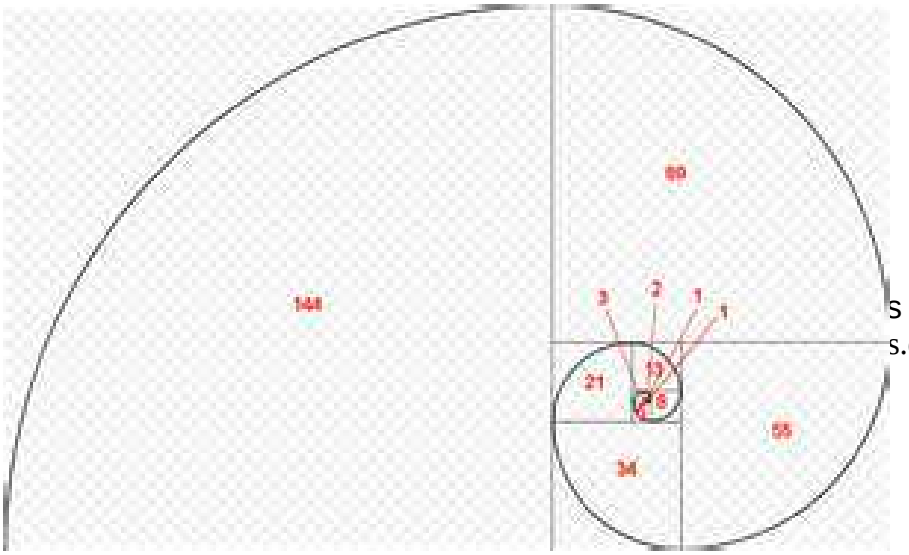


d = diameter of sphere

Before we delve more into how and why the Great Pyramid was constructed lets take a moment to try and understand the "golden" nature of this pyramid.

The Golden Ratio, or Golden Mean, is PHI = (1 + the square root of (5)) divided by 2. It is also given by 1 + PHI = PHI^2. Even though PHI is algebraic, and not transcendental, it is irrational but highly organized as the following spirals based on golden math, the Fibonacci Series show.

The Golden Mean, Golden Section and Golden Ratio can be found in natural structures such as sea shells and plants, and, because of its feeling of "rightness", also in man made structures and art.



What's special about the Russian Pyramids is that they are pyramids that have inscribed within them (invisible) Phi ratio spheres. They are

tangent pyramids that cover inscribed balls (spheres) whose volumes increase from the foundation to the top in accord with the golden section." Many people think (wrongly) that the relationship between the base and the high is Phi but in reality it is not strictly right if one wants to replicate a Russian Pyramid.

The Great Pyramid at Giza is a Golden Pyramid because of the following

The Golden Mean Ratio is given by PHI shown by: (square_root_(5) + 1)/2 = 1.618

The Great Golden Pyramid at Giza has height of 1.272 (square root of PHI) and base 1+1 = 2 and each triangular face intersects the ground at an angle of a little less than 52 degrees.

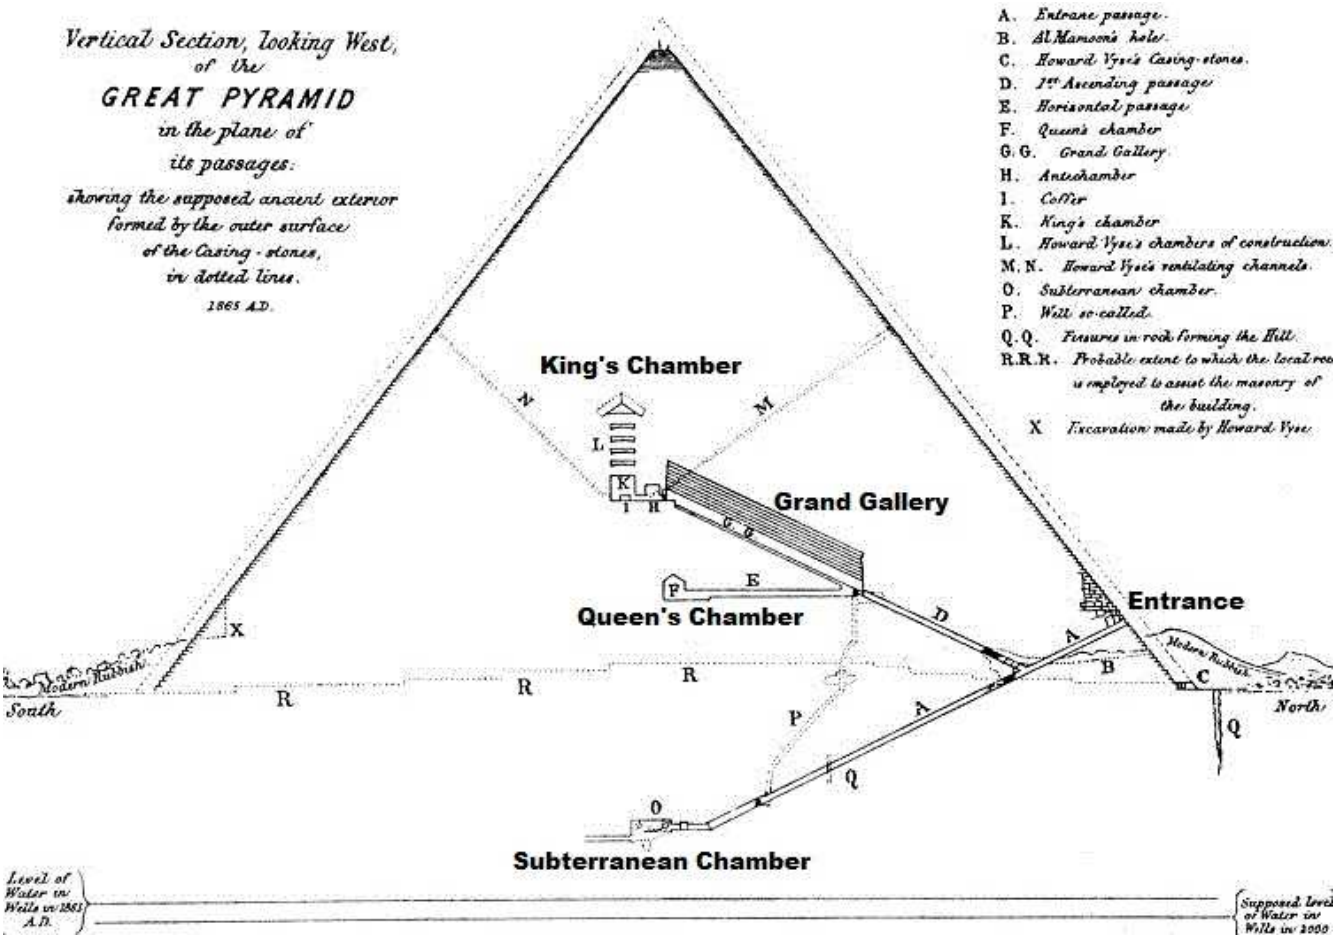
So because four divided by the square root of PHI equals PI, approximately, the circumference of a circle whose radius is the height of the pyramid is therefor 2 x PI x radius = 2 x PI x square root of(PHI) = = 2 x (4 divided by the square root of (PHI)) x square root of (PHI) = 2 x 4 = 8, and since the perimeter of the base of the pyramid is 2 + 2 + 2 + 2 = 8, the pyramid of Giza squares the circle.

With a the capstone intact, the ratio of perimeter to height would be 2 PI: 1760/280 royal cubits = 6.28... .

Each face is an isosceles triangle of height PHI times the semi-base. Such an isosceles triangle has central angle of 63.43... degrees. All measurements must be include a margin of error as there have been numerous earthquakes including several large ones (after the capstone was removed)? And there is even evidence of a massive explosion inside the pyramid, leading some to believe that the great pyramid was constructed as a power generator as suggested by Chris Dunn.

In 1968 Dr. Luis Alvarez, a Nobel prize winner in physics, tried to ascertain whether there might be secret chambers or passages in Khufre's pyramid (the middle pyramid on the Giza plateau, only slightly smaller than the Great Pyramid), by measuring how cosmic rays passed through it. Normally the recording device would show a drop in energy if cosmic rays were passing through an empty space rather than through stone. In this case the recording

tapes, when analyzed by computers, showed that the cosmic particles could not be measured - every time the tapes were run, the patterns were different. The cosmic particles rearranged themselves and some of the data disappeared altogether. "This is scientifically impossible," said one of the scientists, Dr. Amr Goneid ... there is some force which defies the laws of science at work in the pyramid."



The Great Pyramid contains two main interior chambers and a number of interior shafts. The main entrance shaft runs from an entrance on the north face, a little above ground level, and descends at an angle of about 26 degrees and points to the north star looking outward from the center of the pyramid.

The Entrance shaft aims down to the chamber under the pyramid. Partway along the ascending shaft takes off, and heads up to the King's and Queen's

Chambers at an angle of 26 degrees. These shafts point at stars in the Belt of Orion (which Joe Parr believed to be a natural source field torsion-field generator) and the Southern Cross. Two small shafts, with cross section about 8 x 8 PI = 20.3 x 20.3 cm, which is almost exactly the size needed for a wave guide set at the frequency of 21-centimeter hydrogen radio emission this is a critical technique for "seeing" the interstellar medium which is dominated by hydrogen go North and South from the Mid Chamber at an angle of about 39 degrees.

Since the 39 degree angles of the Queen's Chamber shafts are nearly the right-angle-complements of the 52 degree angles of the faces of the pyramids with the ground, these shafts place the Queen's Chamber at the apex of an inverted intersecting and interpenetrating Great Golden Pyramid.

Inside the King's chamber there is a 70 ton granite coffer is inside. It is 41"x38"X89" and is too wide to be taken in or out through the entrance shaft which means it had to be placed there during the construction of the pyramid. Many researchers both ancient and modern believe there was never any use of the pyramid as a burial chamber. Why not? And if not what was its purpose? There is also some conjecture that the size of the sarcophagus was suitable to contain the ark of the covenant, though this bears further research.

Two small shafts, with the same incredibly accurate cross section and dimensions of the shafts coming out of the Queen's Chamber go North and South from the Upper Chamber. To build such shafts to sub-centimeter accuracy through the pyramid at a specific and precise angle would have been incredibly difficult and therefor must be taken as a sign of their great importance.
So, what is the final purpose of the pyramid that was build to optical levels of accuracy, with materials that we still cannot duplicate today, and stones that would still confound the largest industrial cranes on earth. Some believe it to be a power generator, some a transmitter receiver, some a monument to notify us of the importance of the procession of the equinoxes.

Lets look at the transmitter/receiver of energy option for a moment.

The pyramid was constructed from limestone and granite. Limestone is made up of calcium and magnesium carbonates. Calcium carbonate (calcite) is

electromagnetically anisotropic and can be used to control electromagnetic radiation, thus you have all the ingredients for an antennae.

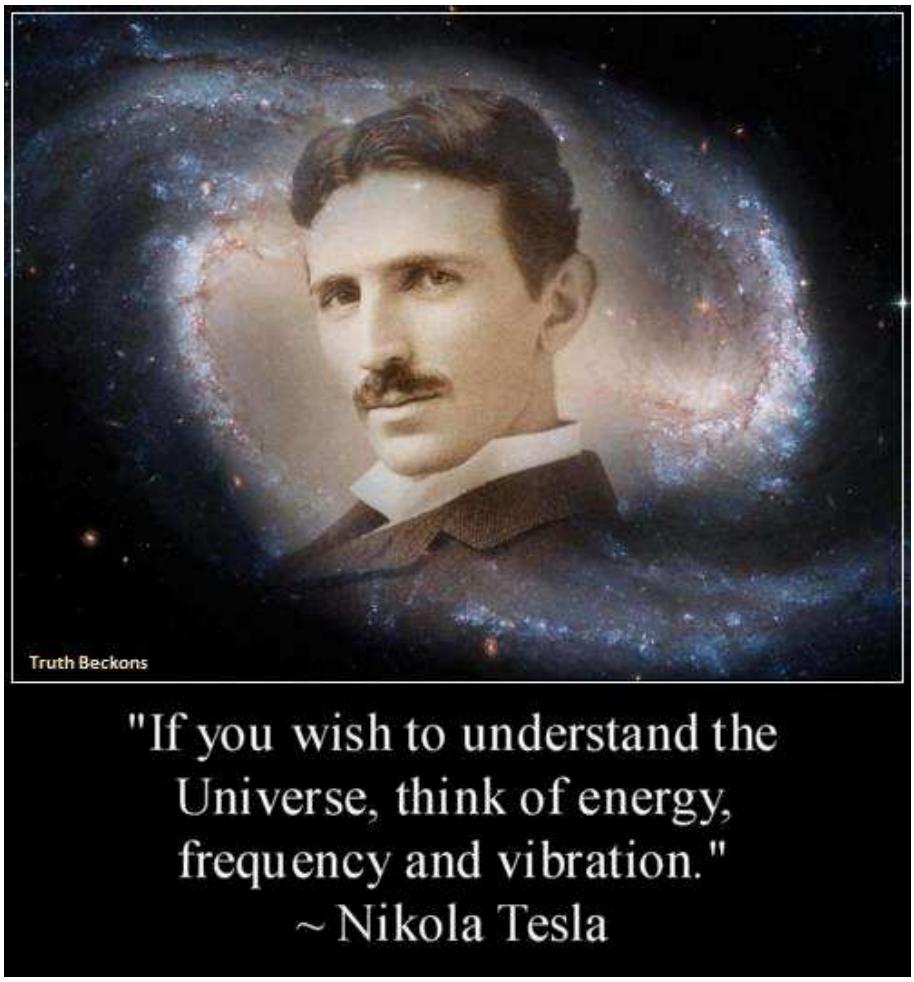
Granite is largely made up of quartz. Quartz can be piezoelectric and made to vibrate when it is subjected to a changing electromagnetic field. Such as when used in the common telephone and in ultrasonic electronics. Since the walls, ceilings, and floor of the Queen's Chamber are limestone, could this have been the antenna material, and this could be a location for receiving information? Could this be why world leaders from ancient Arab Caliphs to Napoleon to modern leaders are drawn to the chambers in the pyramid and often will not speak of what they learned while meditating there?

Then, since the King's Chamber is constructed of granite and is designed to resonate at 440mhz, is free standing inside the pyramid with overhead beams that appear to be tuned as well, all of which can convert sound to into electromagnetic energy, it would seem that this might be a suitable place to send information from. Interesting research being conducted at the University of British Columbia in Vancouver Canada by Dr. Russell is looking at Russian research into quartz sound, electromagnetic interactions and their use in underground mapping. "...Soviet literature, shows that that the conversion of acoustic to electromagnetic signals in quartz, sulfides, and possibly other minerals, produces signals useful for geophysical exploration. Seismoelectric conversions are produced by: linear responses due to electrokinetic conversions; piezoelectric conversions from quartz deposits; pulsed radio-frequency responses from sulfides."

So this means in simple terms that by creating sound in the King's chamber one might be able to transmit it. But to whom? And to where? We will explore tantalizing clues to this question and many other modern pyramid inspired mysteries in the next chapter.

Chapter 4: Related Energy Research

Related Source Field and Torsion Wave Investigation



Because of the amazing volume of work that Tesla produced and the far

reaching implications thereof we will simply tip our hat to him and his work with source field energy and leave that discussion for another day or book!

In 1968 Dr. Backster was the leading CIA polygraph expert in the United States, and while bored after work one day, he started hooking plants up to his lie detector machines. He also did telepathic experiments with plants as well as other living cells. Even showing that by praying over food one can negate the negative influence of killing, cooking, and eating it. This may be why we have Kosher and Halal traditions as well as the strong tradition of praying before meals.

Back before high quality preservatives were common this could literally save your life according to Backster. Who also found, that plants could tell with amazing accuracy when someone was lying as well as a number of other impossible transmissions between plant and human. Including one who registered the profound pleasure of Backster making love from over 20 miles away!

Once when he left his machines on and measuring he determined that plants were very sensitive to all biological life, registering when he cut his skin cells, when he killed bacteria in yogurt, and when he ran hot water down the sink killing bacteria in the drain.

Marcel Vogel was one scientist who followed Backster's work, and in one famous experiment simply picked three live leaves off of a plant, placed them inside a sealed glass container, and each day, spent several minutes affectionately loving and willing two of them to stay alive (praying), while ignoring the other control leaves. The leaves that Dr. Vogel didn't concentrate on turned brown and died within a week while the ones that he actively send good intent to continued to live for several more weeks. This shows a direct link between energy and living organisms. What we shall see later is that even non living things can have profound effects on people, places and plants.

But before we go back to the how you can utilize this life giving energy lets look at some other facts that you may not be aware of such as the fact that the US Patent office has a secret body of officials who meet and discuss all patents, after the US Military has had a look at them for possible influences on "national

security".

In fact over 5135 patents have been prevented from being released under these arcane secrecy laws. They influence all areas of life but not surprisingly mostly things that would put a dent in the massive profit of the oil companies. For example, any solar cell more than 20% efficient will be classified as well as any device for creating energy is more than 70-80% efficient. So the reason why we don't have cold fusion, radiant energy or zero point energy devices is not that it can't be done only that Big Oil is pressuring the non-elected group of patent censors to keep these competing technologies off the market, no matter what the cost to the earth! This is why the Russian Pyramid research is so important as we shall see later in this book.

In his excellent paper Robert Kenny tells us that remote healing, influence, tele-presence and many other fringe activities reportedly using an unknown method of energy transfer are real and have been repeated in numerous tests across multiple laboratories. Here is a brief excerpt of his paper "What Can Science Tell Us About Collective Consciousness?".

Non local, intentional influence. A large number of studies have examined the ability of people to influence other living beings in remote settings. In a series of experiments, for example, influences changed the direction of knife fish, got gerbils to run faster on activity wheels, and slowed the rate of hemolysis (bursting of cell walls) in red blood cells. In 16 remote staring trials, starees showed significantly greater electrodermal activity (EDA) while being stared at (59%, versus 50% chance), indicating that they had unconsciously felt the attention of the starers.

These results have been replicated a number of times. Remote intention has been shown to have a significant calming effect on a group of highly nervous people, and to help participants focus their attention, especially those whose attention tended to wander. In some cases during these studies, telepathy occurred. A number of these findings have been replicated, including intention's effect upon healing.

A meta-analysis has shown that intention can affect a wide range of living organisms, including their healing. Moreover, studies have demonstrated that a

group can significantly influence the eye or gross motor movements, breathing and brain rhythms of a different group. Although the effects were small in scale, ordinary people, who were trying remote influence for the first time, consistently produced them.

The studies succeeded 47% of the time and the studies in general had the intended effect 37% of the time, in contrast to an expected 5% chance success rate. Distance seemed irrelevant, with effects extending even into outer space, during a space mission. Finally, as with other forms of tele-prehension, strength of effect correlated with how much the influencer related to the subject, increasing as the subjects changed from animals, to human cells, to other people. This finding is consistent with Wilber's assertion that humans share a greater number of fields (and subtler fields) with each other, than they share with animals, for example, thereby increasing the means and strength of influence.

Ganzfeld (whole field) experiments eliminate sensory input by placing participants in soundproof rooms, covering their eyes, etc. These experiments, including studies of telepathy, have produced the strongest results, with 82% significantly better than chance. A meta-analysis of all ganzfeld experiments showed odds against chance of ten billion to one.

Distant Healing Intention.

More than 80% of North Americans believe that their "thoughts can cause healing for another person at a distance,"174 as do 75% of family practitioners. Two-thirds of more than 150 controlled studies of distant healing intention (DHI) over the past 40 years have indicated that distance healing can result in statistically significant healing effects. Of the more than 50 of these experiments, that were rated to be of excellent methodological quality, 74% yielded statistically significant results. Meta-analysis of these studies "provide strong evidence that DHI is related to predictable changes in a distant person's physiological state."

The DHI healer uses intention as the essential healing modality, rather than conventional chemical, mechanical or energetic interventions, which are avoided by means of spatial, temporal, and/or sensory shielding. Specific forms of treatment typically include intercessory prayer, non-directed prayer, energy

healing, shamanic healing, non-contact therapeutic touch and spiritual healing. Most healers use a process of relaxation, enhanced concentration and visualization this can be further enhance by the use of sacred geometry such as that found in the Russian Pyramids.

Dr. Elizabeth Targ and Fred Sicher designed a double-blind experiment, using healers who utilized all types of healing techniques, who believed that their healing efforts were going to work, and who had had years of successful experience in distance healing. Over 10 weeks, for six days per week and an hour per day, each healer held an intention for the well being of a patient with end-stage AIDS. Each healer treated a new client each week, so that every healer treated every client, in turn. This ensured that overall healing, rather than a particular technique, was studied. During the six-month trial, 40% of the control group died. But the 10 patients who received distance healing survived and became healthier. A team of scientists concluded that the treatment had worked.

But the control group was 10 years older, on average, compared to the treatment group, which might have accounted for the deaths. So Targ and Sicher repeated the study with 40 patients, controlling for all factors, including age and positive thinking (in each group, 50% guessed after three months that they were being prayed for; belief did not correlate with results). The treatment group, over six months, was healthier in every way: fewer hospitalizations (three vs. 12), hospital days, and new AIDS-defining illnesses (two vs. 12); significantly lower disease severity and doctor visits; significantly improved mood; and, overall, significantly better medical outcomes on six of 11 measures. Fifty statistical tests determined that no other variables accounted for the results.

These results were confirmed by a 12-month study of traditional forms of intercessory prayer (mostly Christian or non-denominational) for cardiac patients. Teams of intercessors, who were not gifted healers, but simply believed that God responds to prayer, prayed for one patient over 28 days, thinking the first name of the patient. Intercessors did not receive feedback regarding results. Neither the medical staff, nor the patients, was aware of the study. Symptoms for the prayer group decreased by 10% more than the control group; and they had fewer adverse medical events, shorter hospital stays, and a number of other superior indicators. As in the Targ/Sicher

study, not the prayer method, but, rather, holding a healing intention, was what mattered.

In all the well designed studies Targ had reviewed, it was this last factor that seemed common: effective distance healers used intention, combined with a request and surrender to a healing force greater than themselves ("the spirit world, a religious figure, the collective consciousness, light, or love"184). Ultimately, healing influence may be drawing upon the life force and consciousness of Spirit itself, with us acting as the receptive and open vehicles for the physical manifestation of wholeness.

This research is an incredible gift to humanity and when coupled with the amazing healing powers of the Golden Pyramid shape can literally work miracles. Imagine. No more pills, prescriptions, surgery, rehab, bills, fear, and downtime. Best of all, we can not only heal ourselves but heal others! And as I will show later there is even a way to heal the whole human race..

So how does this, as Whilhelm Reich called it, orgone energy interact with us? We know that the golden pyramid shape is a collector of some kind. We also know that it was important enough to the ancient Egyptians to invest incredible time, effort and intelligence in building the Great Pyramid to interact with it. Further, there is the fact that many powerful people are drawn to the chambers in the pyramid and have life changing insights while there. So by what method is the information, energy or holographic patterns transmitted to us.

One very likely candidate is the pineal gland.

The pineal gland is located near to the center of the brain, sitting between the two hemispheres. The pineal gland is not isolated from the body by the blood-brain barrier system which makes it more able to access "information" from both the bodily systems and the energetic realm. As part of the epithalamus it is a mid line structure, and is often seen in plain skull X-rays, as it is often calcified. This calcification is typically due to intake of fluoride (a industrial waste product) often added to water and found in toothpaste. This calcification is problematic and can be overcome in several ways most simply by the consumption of fermented cod liver oil or fermented butter oil from grass fed organic cows milk

The pineal/pinecone connection is not lost on those in power at the Vatican...

This pine cone shaped gland's location deep in the brain seems is made more

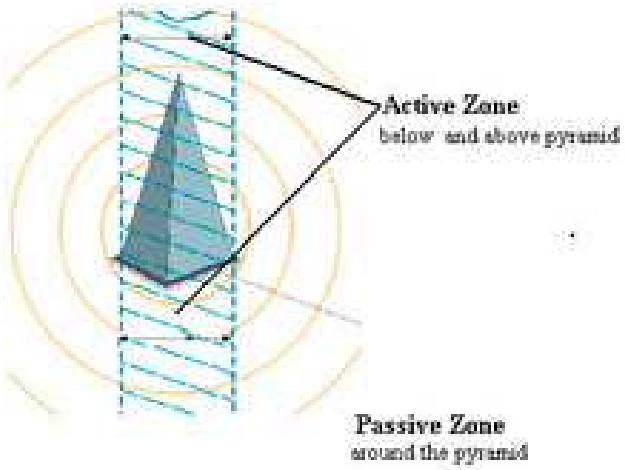
interesting as it has now been proven to be capable of reacting to photons of light. How this light gets into the center of the brain is still unknown but the capacity of the "third eye" to see is well known to advanced spiritual traditions going back thousands of years. The pineal gland, or third eye, is located in the geometric center of the brain. This correlates interestingly to the location of the Great Pyramid in the geographic center of the physical planet. The pineal gland is photo receptive, that is to say it is activated by light, and it controls the various bio-rhythms of the body. It works in harmony with the hypothalamus gland which directs the body's thirst, hunger, sexual desire and part of the biological clock that determines our aging process.

While the physiological functions of the pineal gland have been a mystery until modern scientific exploration, mystical schools and traditions have taught that it is the link between the physical and spiritual worlds. Think about the most powerful and highest sources of ethereal energy available to humans, and even the US $1 dollar bill with the "All Seeing Eye" on top of the pyramid. The pineal gland has always been important in initiating supernatural powers development of spiritual talents and has been described as an organ of higher vision.

There are many ways to activate the pineal gland and achieve higher frequency in ones life. Meditation, diet, chanting, drumming, direct experience of psychic energy from a gifted teacher, sometimes even spontaneously during an accident or stressful situation. All of these may trigger an "awakening" of the pineal

however if one wishes to activate the 'third eye' it is important to remember that in to raise one's frequency and move into higher consciousness the role of sacred geometry and golden pyramids specifically can not be over looked.

Whatever you undertake if it is done inside your Russian pyramid there is a much higher likelihood that the pineal will activate and the third eye will open and allow you to 'see' beyond the physical. Modern scientific research is now proving that we have the ability to communicate, influence, heal across distance but even to react to things that haven't happened yet! So building your own pyramid is like adding a turbo boost to your energetic evolution. And as you practice, whatever spiritual or sacred tradition you are working with you will increase your vibrational rate and psychic abilities will increase as well as your clairvoyant dream time messages.



You may first begin with your eyes closed, but as you practice, you will be able to open your third eye by focusing your attention and receiving messages with your physical eyes open. Planetary vibration/frequency is accelerating exponentially, allowing souls to peer into other realms far more easily than in the

past. This frequency will continue to rise until consciousness evolves out of the physical in the coming years. Now you can be a real part of it. Not standing on the sidelines reading about it. You can begin to tap into universal, free, loving energy that creates life, improves everything it touches and was so important that humans have been channeling it with the pyramid shape for over 10,000 years.

As we go about life we often wonder. "Why am I here?" "What is life all about anyway? There must be more to it than chasing after money, power or sex." Well as Dr Micheal Newton, PhD. accidentally discovered and shared in his 1994 book, "Journey of Souls", there is much more to what we are doing here. What he found may shock you, may confound you, but it was well known to the ancients. In fact the Egyptians were well aware of the fact of an afterlife and made elaborate (though unnecessary) preparations for it.

Amazingly Dr. Newton found that in the vast majority of his deeply hypnotized patients the experience of life between lives where they reported actively planning the next incarnation, including traumas, lessons, relationships and experiences are universal across the religious and spiritual spectrum.

When Dr. Newton, a certified Master Hypnotherapist, began regressing his clients back in time to access lost memories and resolve trauma he stumbled onto a discovery of enormous proportions: that it is possible to "see" into the spirit world through the mind's eye of subjects who are in a hypnotized or super conscious state. Moreover, clients in this altered state are able to describe what their soul was doing between lives on Earth. Amazingly these descriptions fit with many other spiritual traditions and but were not related to current religious belief or affiliation.

When one begins to understand and even experience through the meditation, trance or hypnotic regression that we are timeless, eternal and perfect inside whatever body we have there is an amazing relaxation. A letting go of stress and struggle and a much higher likelihood of finding the real reason you are here. All of these mental states are powerfully enhanced by even the presence of a golden pyramid. And if one actively seeks higher knowledge and energy while inside the pyramid, as Napoleon and many others have done, what would be revealed to you then? And thanks to the Russian research led by Dr. Golod it is

now possible to create these pyramid powered miracles in your own home, yard or community simply by channeling energy that has so far remained outside of what science admits is possible.

The Power of the Mind and Heart in Harmony

And just in case you think meditation is "a waste of time" or "too much trouble" read the following excerpt from The International Center for Invincible Defense very carefully:

During the Israel Lebanon conflict of 1988 a number of scientific studies were done looking at the effect of meditation on the conflict. Since that time the idea of people meditating on peace will actually reduce conflict has been confirmed by more than 50 demonstrations and 23 scientific studies. This research has been carefully scrutinized by independent scholars and accepted for publication

in top academic journals. In every case, this approach produced marked reductions of crime, social violence, terrorism, and war, and increased peace and positivity in society.

In seven consecutive experiments over a two-year period during the peak of the Lebanon war the following results were observed:

- war-related fatalities decreased by 71%
- war-related injuries fell by 68%
- the level of conflict dropped by 48%
- cooperation among antagonists increased by 66%

The likelihood that these combined results were due to chance is less than one part in 1019, making this effect of reducing societal stress and conflict the most rigorously established phenomenon in the history of the social sciences (Journal of Social Behavior and Personality 17(1): 285-338, 2005).

The Journal of Offender Rehabilitation, studied large scale organized meditations effect on the level of global terrorism after three large coherence-creating assemblies using meditation was undertaken. The results of these organized sessions were studied retrospectively through by the Rand Corporation.

The data revealed a 72% reduction in worldwide terrorism during the three assemblies taken together, as compared to all other weeks during a two-year period. Each assembly had approached or exceeded the participation threshold (8,000) predicted to create a global influence of peace. The study ruled out the possibility that this reduction in terrorism was due to cycles, trends, or drifts in the measures used, or to seasonal changes (Journal of Offender Rehabilitation 36 (1-4): 283-302, 2003).

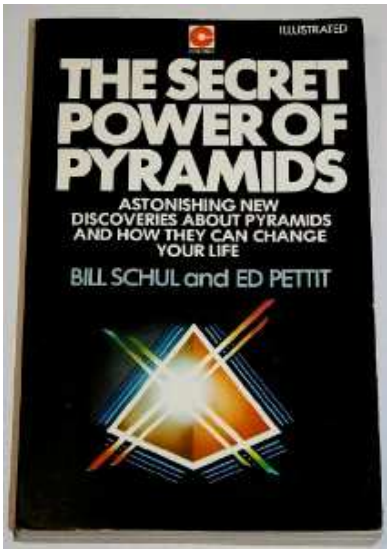
So science has now caught up with what the ancients and our parents have been telling us all along. What you think does count! And by being positive, peaceful and holding those thoughts you do influence the world. Now, what if you add in the powerful influence of a pyramid? A sacred geometric shape that actually shapes, directs and focuses the source field, prana or zero point energy? How powerful would those meditations have been if they had been

done inside or near the Russian pyramids?

Remember, when Dr. Golod was asked why he was building his pyramids he said, "How can I not? I love my kids and grandchildren too."

Chapter 5: Russian Pyramids

Early Pyramid Research



ILLUSTRATED
THE SECRET POWER OF PYRAMIDS
ASTONISHING NEW DISCOVERIES ABOUT PYRAMIDS AND HOW THEY CAN CHANGE YOUR LIFE
BILL SCHUL and ED PETTIT

Antoine Bovis a French hardware store owner and psychical researcher first came up with the idea that small models of pyramids could preserve food in the 1930. He came to his conclusions using dowsing and accessing source field energy information.

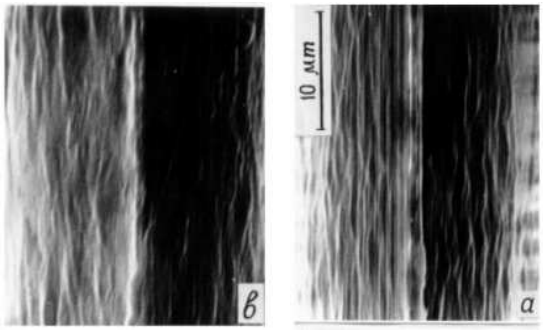
He thought that, "Egyptians were already very good dowsers and had oriented their pyramid by means of rod and pendulum. Being unable to go there to experiment and verify the radiation coming from the Keops Pyramid, (despite stories to the contrary: author's note) I have built with cardboard some pyramids that you can see now, and I was astonished when, having built a regular pyramid and oriented it, I found the positive at the East, the negative at the West, and at the North and the South, dual-positive and dual-negative. After further research Bovis discovered that his cardboard pyramids could preserve meat, small animals and also sharpen razor blades.

In 1949 a Czechoslovakian named Karel Drbal following Bovis's lead recreated Bovis's work including sharpening razor blades, preserving foods, etc. and successfully applied for patent number 91304 on a "Pharaoh's shaving device": a model pyramid alleged to maintain the sharpness of razor blades. The Chief scientist of the patent office in Prague was skeptical and so recreated the sharpening experiment, to his amazement it worked, though no one knew why. Drbal's device focused the source field, although he was unclear how it actually

worked or whether it was the device's shape or materials that exerted the effect.

We now know it was both! The shape of the pyramid (a scale model of the Great Pyramid) and the material (cardboard or later Styrofoam) were both key to his invention. Then, in 1968, authors Ostrander and Schroeder visited Czechoslovakia, where they discovered one of Drbal's patented pyramids. They tracked down and interviewed Drbal, then wrote a chapter in their book Psychic Discoveries Behind the Iron Curtain about pyramid power. The book showed the rest of the world both the concept of pyramid power.

Now, just in case you think this is all old hippie stuff remember that Dr. Volodymyr Krasnoholovets using the new shaped Russian pyramids proved it again in 2001 and showed the results using scanning electron microscopy.



The second image is after exposure to the pyramid. Notice how straight and uniform the edge of the blade has become. Thus showing that the pyramid had somehow sharpened the razor blade.

Russian Pyramids Offer Protection Against EMF, Negative Thought Forms and Other Nasties.

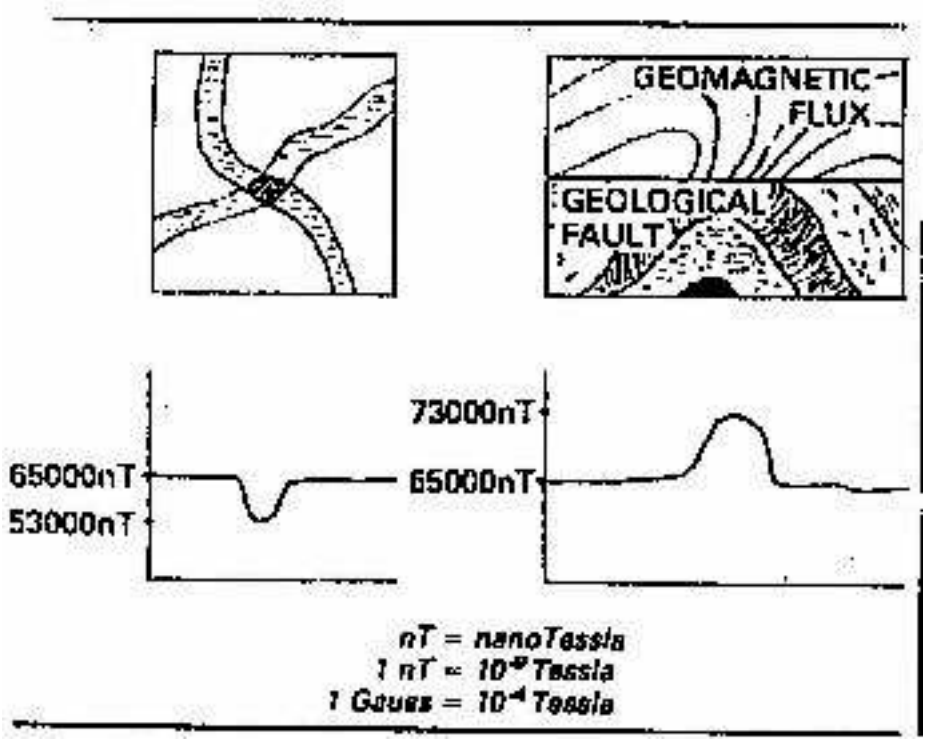
Researchers looking into the "tomb" in the center of the Great Pyramid noticed strange effects:
1. self-cleaning of precious stones and metals
2. self sharpening of fine edged metal tools. In fact a successful patent for sharpening razor blades was made and marketed until disposable razors became the norm.
3. mummification of organic tissues

These properties are very well documented and show us that there is a definite interaction between the sacred geometry of the pyramid shape and the environment.

Scientific studies have shown that pyramids work using the theory of volume resonance. This means that pyramids keep their energy gathering properties, regardless of size! However, the intensity of the display of these properties depends on the size, material, construction methods, physical location and orientation.

It is established that the radius of the "positive" bio field around shungite pyramids exceeds the radius of the pyramids made of other minerals. Thus, the radius of the pyramids made from quartz, lazurite or jade covers 0,5 - 3 meters, and around the pyramids from shungite - at a distance greater than 5 meters.

The results of experiments have now confirmed that the pyramid shape (especially the steeper angled Russian style which projects energy outward) is a reliable shield against electromagnetic radiation (EMF), as well as geopathogenic phenomena.



These well documented "dead zones" that occur in nature because of faults, underground water flow, dangerous mineral deposits and radioactive ores will

cause a range of negative effects on a person who is in the range of these geopathogenic zones on a daily basis. Especially if your bed is on or near one of these zones or lines you will find your body attacked by invisible geopathogenic energy, causing inexplicable malaise, apathy, headache, weakness and eventually mental, emotional and physical degeneration. These little understood emanations weaken the immune system and medical researches now indicate that geopathic radiation may cause cardiovascular disease and up to 60% of cancers. And before you right off geopathic stress as just another wacky paranoia, remember the fact that many animals: including cats, dogs, birds and snakes can sense earthquakes minutes, hours and sometimes days in advance, *and science can't explain it.*

Luckily for us a medium to large Russian pyramid is one of the most effective means of protection against geopathogenic radiation. The Russian pyramid because its energy is focused out rather than in is able to reduce the negative impact of environmental toxicity, as well as reduce or completely neutralize geopathic anomalies. This is on top of the healing, calming and life promoting energy that the pyramid puts off all the time.

Living close to a Russian pyramid has been shown to strengthen the immune system, improve overall health, relieve nervous tension, eliminate the headache and insomnia and increase vitality in humans as well as pets, plants and all other living things within the pyramids range.

Russian pyramids are able to protect those near them from the harmful electromagnetic radiation of cordless phones (you really should go back to corded though!), Wifi (cabled ethernet is WAY better), TV sets (get rid of it or at least cover it up and unplug it when not in use), computers, microwave ovens (again we suggest not eating irradiated food from a "nuker" but if you must use glass containers!), refrigerators, and hair dryers.

In addition, Russian pyramids like certain crystals have the ability to clear the accumulated negative "field" or as some call it dead orgone energy, from jewelry, coins and other small items.

With Kirlian photography Dr. Patrick Flanagan demonstrated that while most of the positive energy is focused within and beneath the pyramid, some is also diffused from the five points. Many who have stood on top of the Great Pyramid have described sensing a high energy field or electrical charge.

Since the 1970s engineer Joe Parr, a member of the Great Pyramid of Giza Research Association, has written about theoretical "mass particles" that the pyramid shape attracts and traps. He states that these particles produce an orb-like energy field or "containment bubble" around any true pyramid, which shields out other energies. Using his gamma ray transducer he was able to study this energy field, which emanates from the one-third height level of the pyramid, the geometric center (which he pinpoints as the Queen's Chamber in the Great Pyramid).

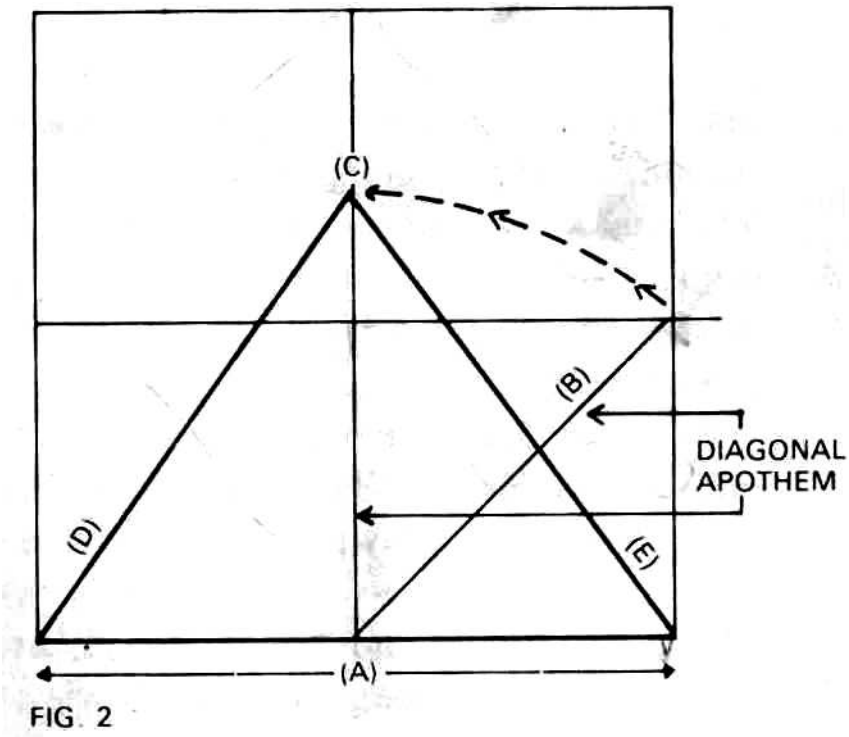


FIG. 2

He claims this center holds three mass particles captive as long as there is space for ions to flow. He found that sun spot activity and the phases of the moon had an effect upon the intensity of a pyramid's energy field, and that at certain times of the year the field would block all electromagnetic radiation and even the force of gravity.

Note: the protective properties of Russian pyramids are a function of size. So when you are building yours bigger is better or build a lot of small ones. This is also good because then the pyramids form harmonics and redouble the output of harmonizing source field energy.

It is recommended to place your pyramid as close as possible to those places where you spend most hours every day - near to the bed, desk, etc. The pyramid should be near you at the same level (not higher and not lower) and at a distance not exceeding 6 times its height, for example, if you have a 4.5ft pyramid it will protect an area up to 40ft around it but if you have a 36ft pyramid in your back yard it will cover your whole property and keep the neighbors garden growing like crazy too. We also recommend putting a small pyramid near the bedroom for extra protection while sleeping. Also when a Russian pyramid is placed next to a sick bed, it will feed the patient's internal energy, activate the immune system and if the patient is drinking pyramid water there are amazing results being reported.

Dr. Golod recommended that the pyramid be sited outdoors away from human constructed things for it to work best. For some this will be no problem, for others you will have to make due with smaller indoor pyramids. However don't forget to bring a small one with you when you go to places with fresh air, nature and sunlight it will improve your picnic that's for sure!

Russian Pyramid Protection Against Out of Body Entities

The word Pyramid breaks down to "Pyre" which stands for fire and "Mid" for middle-fire in the middle-the fire within. The value of the pyramid is that it acts as a shield that protects you from the influence of both random and directed thought-forms, disembodied entities and other "negs" that may be present in and around your location.

Russian pyramids (all pyramids of course, but Russian ones specifically) can be best described as receivers or coherency generators using source field energy. Some might call source field energy orgone as Wilhelm Reich did. Wilhelm Reich through his research on purifying energy fields, discovered that by layering organic and inorganic matter, orgone energy could be condensed, and magnified. This form of energy is known by various cultures as Chi, chi, prana, Ether, or source field energy.

	Cylinder	Regular polyhedra (platonic solids)				
		Tetrahedron	Hexahedron, cube	Icosahedron	Dodecahedron	Icosahedron
Figure						
Faces	**2**	**4**	**6**	**8**	**12**	**20**
Edges	2	6	12	12	30	30
Vertices		4	8	6	20	12
Edges each face	1	3	4	3	5	3
Edges each vertex		3	3	4	3	5

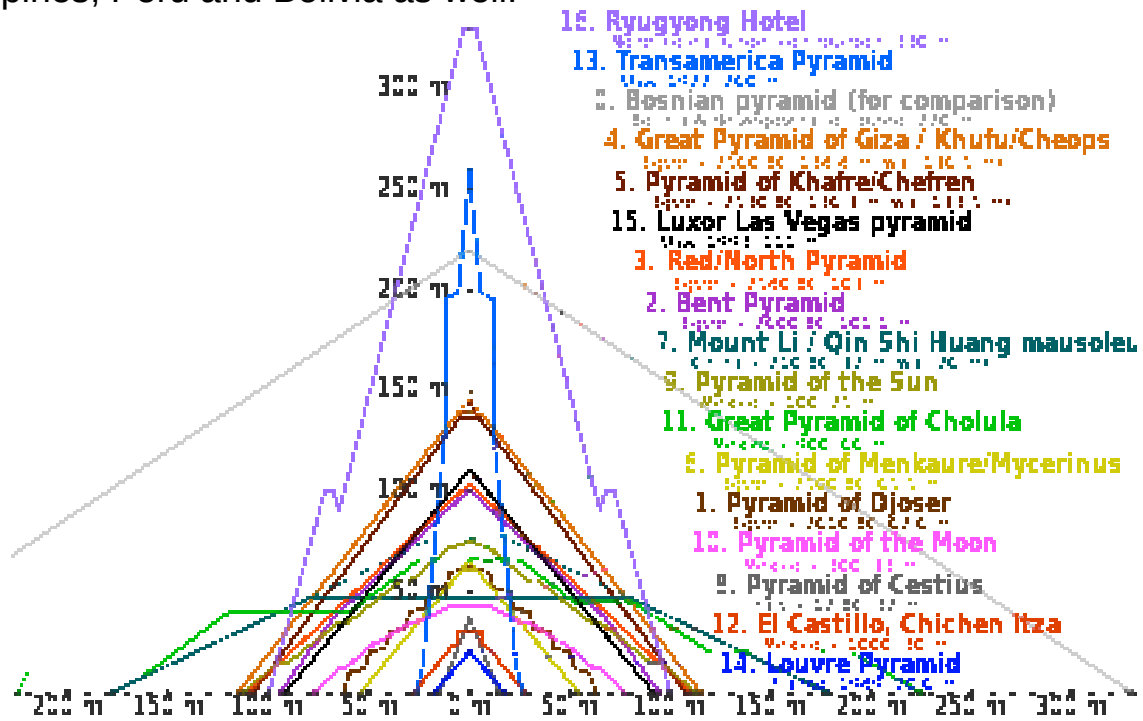
Reich created physical devices (based on platonic solids and sacred geometry) to harness this energy and cure illnesses, modify weather and other amazing feats. Reich was considered to be one of the greatest natural scientists of the 20th century. Source field energy is the animating force behind all creation and has the ability to automatically radically transform lower (negative) energy into higher (positive) energy by increasing the vibrational rate of everything within the range of the pyramid. Having a pyramid near your will give you and the planet many benefits including:

- more vitality and more restful sleep
- relieve mental and physical stress
- aids meditation & increases spiritual growth
- energize food, water, herbs and supplements
- create a more harmonious home & workplace
- protect yourself from negative energies
- clear emotional and energetic blocks.

As recent studies have proven, you can use the power of focused intent (prayer, visualization, etc) to channel the source field energy towards others who need healing, assistance or just to the world. Remember the power of group mediation where approximately 8,000 people meditating reduced global terrorism by 73%! Just think what could be accomplished if all eight thousand of those meditators had had a pyramid to meditate in or near.

Russian Pyramids Revealed: A Builders Guide

Before we jump back into the Russian pyramid mystery, lets talk for a moment about the fact that there are literally hundreds of other large pyramids around the world both built and carved out of living rock. Everyone knows about the pyramids at Giza in Egypt and in Chitzen Itza Mexico but how many know that there are five huge pyramids Bosnia and Herzegovina? And more than twenty other pyramids have been found in Italy, Spain, France, Croatia, Slovenia, Serbia and Greece. Over the last few years it has come to light that there are in fact more than 300 pyramids in central China but they have yet to be excavated in explored. There are also well documented reports of pyramids in the Philippines, Peru and Bolivia as well.



16. Ryugyong Hotel
13. Transamerica Pyramid
4. Great Pyramid of Giza / Khufu/Cheops
5. Pyramid of Khafre/Chefren
15. Luxor Las Vegas pyramid
3. Red/North Pyramid
2. Bent Pyramid
7. Mount Li / Qin Shi Huang mausoleu
9. Pyramid of the Sun
11. Great Pyramid of Cholula
6. Pyramid of Menkaure/Mycerinus
1. Pyramid of Djoser
10. Pyramid of the Moon
8. Pyramid of Cestius
12. El Castillo, Chichen Itza
14. Louvre Pyramid

So the real question is, “Why were prehistoric people so keen on building these huge, expensive structures?” As someone said, "Follow the money", which in the case of ancient pyramids means there was a HUGE benefit to the people who were financing these amazingly costly building projects. Lets see if we can uncover more of the benefits that have recently come to light with the building of the Russian pyramids.

Before 2001 Dr. Golod's work was largely unknown in the west. That all changed when Dr. John DeSalvo publishes his amazing Complete Pyramid Source Book.

The research he describes in his book can be described as groundbreaking and as word spreads interest grows. Here are some of the key facts that he uncovered and mentions.

The Russian/Ukrainian research started in 1991 and by 2010 Dr. Golod and his team have constructed over 50 of golden section pyramids in 8 different locations across Russia and the Ukraine including The pyramids were built in many places including Moscow, Astrakhan, Sochi, Zoporozhye, Voronezh, Belgorod, the Tver Region, Krasnodar, Tolyatti, Uzbekistan, and France. All these pyramids are constructed using the golden ratio of 1:1.168. His largest pyramid stands at 144ft tall and weighs 55tons which considering it has no metal in it is quite amazing. Dr. Golod was very specific when describing his construction process and said that, "no metal and only non conductive materials must be used". This is an important point and will become more clear when we come to the chapter on building our own pyramid.

The largest pyramid is 144' high, 2nd largest 72' high, 3rd largest 36' high, notice they are all built using The Golden Section measurements used by ancient architects which dictates that the pyramid sizes will always be in ratios.

As you most likely know already the pyramid shape, especially the steeper golden section Russian style pyramid have powerful source field focusing capabilities. Therefore it is not at all surprising that soon after the construction of a pyramid near Moscow, botanists noted flowers and plants that had been extinct for generations starting to grow near it. Some bacteria can remain dormant for thousands of years Scientists recently sprouted a 10,000yr old lupin seed that had been frozen in permafrost, in my opinion it is the powerful

harmonizing, healing and rejuvenating energy coming off the pyramid that is responsible for dormant, frozen or deeply buried seeds coming back to life long after they were supposedly extinct.

After the construction of the pyramids five major categories of experiments, as follows, were performed by a team of researchers from the Scientific Manufacturing Union Gidrometpribor in Russia and others, directed by Dr. Golod.

During construction and after it was complete Russian scientists and radar experts using an array of sensors measuring in the centimeter range placed at distances of 60, 32, and 30 kilometers form the base of the pyramid did a series of tests looking for radar reflectivity. To their amazement they got a consistent radar return rising directly off the point of the pyramid. This "ion column" rose to a height of up to 2km, had a reflectivity of a modern aircraft and was in constant motion. Possibly due to fluctuations in the source field or torsion waves.

Further testing by the Scientific and Technological Institute of Transcription, Translation and Replication in Kharkiv, Ukraine, confirmed what they called the "ionic formation" rising up to 2000 meters above the pyramid and have a width of 500 meters. This was described in their research as an ionization of air. An upward flow of the air over the pyramid was also noted. These results showed that the pyramid's influence reached out to over 300km by looking at ionization in the local atmosphere.

This research is consistent with reports from Egypt and with Reich's work with orgone accumulators. The ion column could be shown in other ways as well. Electrical energy from the pyramid could be harnessed by a capacitor that was placed at the apex of the pyramid; the capacitor would spontaneously take on a charge. It was also discovered that people working near the top of the pyramid might start to experience dizziness and nausea, and need to be taken some distance away from the pyramid for these effects to subside.

Geometric shapes, (specifically platonic solids) properly constructed and oriented will channel, organize and harmonize source field energy to the benefit of nearby living organisms. Atmospheric monitoring also showed a marked

reduction in violent weather in the vicinity of the pyramids. In one case a storm was tracking directly toward the 144ft pyramid and changed course around the pyramid then resumed its original course!

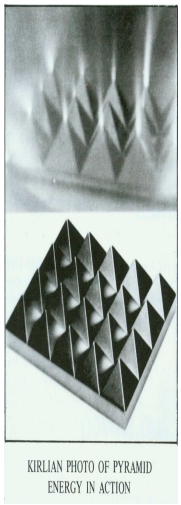
Note: There is strong evidence to support the idea of a planetary grid or even a crystalline structure inside the earth that impacts the location of sacred sites throughout the world including Machu Pichu, Giza, Easter Island, Angkor Wat, etc. In fact ancient peoples specifically placed large monuments where the "points" of such a crystalline structure would appear at the surface.

Several months after building the 144ft pyramid, Russian environmentalists noticed that the ozone layer in the atmosphere above this pyramid was starting to repair itself. This is even more interesting when one considers that Dr. Alexander Golod predicted this would happen before he built the pyramid! Statistics by Eastern Bloc seismologists, using the most up to date monitoring equipment have shown that seismic activity diminishes in the areas where Russian pyramids have been constructed - instead of one powerful earthquake, 100's of tiny ones occur instead. Could this be another of the many reasons so many "primitive" cultures expended so much energy to build pyramids all around

the world?

Strange rings observed in rocks placed inside the pyramid; when Dr. Golod's experimenters placed samples of granite and crystal on the floor of the pyramid for longer periods of time. A visible ring would appear evenly throughout the chunks, showing a clear change in the appearance of the stones when under the pyramids influence.

Between the end of 1997 and the beginning of 1999, this result was able to be duplicated 40 different times in the same pyramid, with different rocks each time. Each ring would cover between 50 and 300 rocks, with a total weight from 20 to 200 kilograms. Golod et al. have gathered evidence to suggest that when the rings form most visibly, the amount of epidemics in the surrounding area will decrease. This is very significant when viewed in relation to the biological effects near the pyramid and Joe Parr's work showing that there is a cycle of influence of the source field torsion waves over time as well as with the lunar cycle.



KIRLIAN PHOTO OF PYRAMID ENERGY IN ACTION

Interestingly the All-Russian Electrotechnical Institute, Moscow showed that the pyramid also has a protective effect when it comes to lightning strikes and other electrical discharge phenomena. These tests were done by exposing granite to the structuring effects of the pyramid then placing them in a ring on a steel plate. The plate was then subjected to a series of electrical discharges of over 1,400kV. Each of these blasts will typically "discharge" and burn up a portion of the metallic plate, which is known as a "defeat," and these defeats are logged and plotted.. Compared to a control plate the pyramid protected plate received 5,00% less arc strikes. Obviously, normal granite rocks would not produce such an effect - only those that have stayed in the pyramid.

It seems that the rocks exposed to the torsion fields in the pyramid were much more capable of distributing the electrical charges. This appears to be due to the fact that the electron clouds of the atoms in the rocks became more uniformly spin-polarized in the pyramid, thus helping to absorb and spread out electrical charges more evenly. Traditional scientists are at a loss as to how to explain this, though the proof is right in the facts.

It has been seen over and over again that exposure to the pyramid's energy changes the physical properties of matter. This is supposedly impossible yet in documentation overseen by Dr. Yuri Bogdanov on behalf of the Joint-stock Company, "Scientific and Technological Institute of Transcription, Translation and Replication" (TTR), in Kharkiv, Ukraine and provided by Prof. V.I. Kostikov and Dr. A.C. Katasonov from the R&D Institute "Graphite" within the Russian Academy of Sciences showed an increase in resistance in pyrolitic carbon test samples of over 100%.

Now that means nothing to most people but when compared to the fact that the same carbon samples resistance would only increase by a minimum of 5% after being bombard with neutron radiation in a nuclear reactor, it speaks volumes. When the control carbon samples were further analyzed it was noted that after exposure to the pyramids, the half-life of the then radioactive carbon had been reduced. Further experiments using different elements showed that, silicon semiconductors showed a lowering of their electrical resistance, moving from 10^5 to 10^4 ohms per centimeter, and high-temperature superconducting materials lost their superconductive properties after a one-day stay in the pyramid.

Looking in the patents section at the end of this book one notices that Dr. Golod came up with a patent using his pyramids to increase the quality and flow of oil production in an active oil field. Now this seems like pure science fiction to most, but to those of us who are beginning to appreciate the awesome power of the source field it makes perfect sense.

In fact it made sense to the Moscow Academy of Oil and Gas and their co researchers at the Gubkin Academy of Oil and Gas as well because when they installed a specially designed complex of pyramids on an active oil field the actual viscosity of oil decreased by 30%, which led increased oil production. Also, the oils molecular structure (remember oil is an organic molecule originally of biological origin) began to change.

The scientists noted a reduction of heavy tar, paraffin, and other heavier oil byproducts. This in effect means that the fractional structure of the oil had shifted towards the light fractions, hence the term "light sweet crude".
Other unusual effects on liquids were noted as well including a new state of

matter. This was observed when water was left in the pyramid overnight and upon return (after being exposed to minus 40c) the water was still liquid! To the surprise of the observers when someone picked up the bottle of water it instantly "flash froze" and went from liquid to solid in just a few seconds. This phenomena has never been reported before and has been repeated in the larger Russian pyramids over a number of years.

After the carbon testing, Dr. Bogdanov built a complex of pyramids in a town near the Arkhangelsk region of Russia by order of the domestic administration there to see if the pyramids could influence ground water contamination. (One wonders if this would work after "fracking" as well?)

In the case that Dr. Bogdanov was involved with strontium and heavy metals that had contaminated a well were cleared after the construction of the pyramids, this is quite similar to how unwanted materials were filtered out of oil in previous experiments.

After the success in Arkhangelsk Dr. Bogdanov looked at a salt contaminated well in the town of Krasnogorskoe near Moscow, a pyramid was constructed that reduced the amount of salt in water, again making it more drinkable.

As Ukrainian and Russian scientists began to absorb the sheer number of unusual effects that the pyramids were generating they started looking at seeds, because there seemed to be a very strong correlation between plant health and the location of the pyramids.

After exposing a range of commonly used seeds to the inside of the pyramid for 1-5 days the seeds were sown across over 10,000 hectares of land in many different micro climates. Amazingly the crops were much more resistant to lack of water, more disease and pest resistant, phytates and other substances harmful to humans and animals were lower and overall yield increased anywhere from 20-97%. This result shocked the agricultural scientists and yet gave them great hope because as more pyramids are build more seeds can be treated and more food can be grown to address rising population and diminishing farm productivity. I wonder what would happen to a terminator seed exposed to the pyramid? Would it become fertile?

Other research looked at human biology in relation to the pyramid energy. The first study cited in Dr. Krasnoholovets' summary paper is by Prof. S.M. Klimenko and D.N. Nosik, MD from the Ivanovskii R&D Institute of Virology within the Russian Academy of Medical Science.

This research done by Dr.'s Nosik and Ivanovskii from the Institute of Virology was done using immunoglobulin. In the tests encephalomyocarditis specimens were cultured. Research showed that the pyramid treated immunoglobulin was placed in the sample viral growth was reduced by more than 300%. In another experiment by Dr. N.B. Egorova at the Mechnikov R&D Institute within the Russian Academy of Medical Science, mice were subjected to a fatal dose of Salmonella Typhimurium. The treated mice were then placed in the pyramid for various amounts of time while the control group was not. Among the different groups of mice exposed to the pyramids, 35-40% survived while the non pyramid exposed mice were all dead at within one month. Very similar results were observed with mice exposed to other normally lethal carcinogens and given pyramid-treated and non-pyramid-treated water.

After hearing of the results of the mouse study the team of Prof. A.G. Antonov from the Russian R&D Institute of Pediatrics, Obstetrics and Gynaecology undertook a pilot program that tested the effects of a solution of 40% glucose in distilled water after it had been stored in the pyramid. By administering only 1 milliliter of the glucose to 20 different prematurely born infant patients with compromised immune systems these infants with low indexes (very premature, unlikely to live, etc.), had their levels of health rapidly increase up to practically normal values. Later the researchers showed that the glucose was not necessary, the healing effect could be produced by simply using 1 ml of pyramid water. This study ultimately had to be discontinued on the grounds that it was inhumane to keep any of the babies from the potential life saving effects of the pyramid water.

Other Observed Pyramid Effects Related to Human Health

Under less strenuous laboratory conditions, Golod's team determined the following:
- Poisons and other toxins become less destructive to living systems after even a short term of exposure in the pyramid.

- Radioactive materials held inside a pyramid would decay more rapidly than expected.
- Pathogenic viruses and bacteria become significantly less damaging to life after being held in the pyramid.
- Psychotropic drugs have less of an effect on people either staying inside a pyramid or within close range of a pyramid.
- Standard solutions such as glucose and iso-osmotic solution become effective for treating alcoholism and drug addiction after being placed in the pyramid. They can be administered either intravenously or orally.
- rabbits and white rats exposed to the pyramid gained 200% more endurance and their blood gained a higher concentration of leukocytes, or white blood cells
- salt and pepper exposed to the pyramid and fed continually to over 5,000 people in different jails in Russia caused dramatic improvement in their overall behavior, and criminal behavior almost completely disappeared

Extending and Exploring the Russian Pyramid Research
(Excerpts from The Divine Cosmos by David Wilcock)

In this section we will look at another name for the source field, zero point energy, chi, etc. and call it "torsion" because of its connection to gravity and the fact that it ultimately is very connected to spin as Nassim Haramein of the Resonance Project Foundation has shown so well.

Every object has mass. That mass influences the flow of torsion waves around it: As Nasimov puts it, "Every object having a certain surface geometry will simultaneously generate left and right torsion fields of a certain configuration depending on the geometry of the object. This fact can be detected by various types of physical, chemical and biological indicators. The unusual effects demonstrated by pyramids, cones, cylinders, flat triangles, etc. have been repeatedly observed by many researchers in different countries."

These specially-shaped objects can be referred to as "passive torsion generators." The source field coherency effects have been studied by A.I. Veinik, V.S. Grebennikov, Yu.V. Tszyan Kanchzhen, I.M. Shakhparonov, A.A. Beridze-Stakhovsky, A. Golod, V. Krasnoholovetz, Joe Parr and others using many shapes but most importantly the Platonic solids.

The A.E. Akimov group at the Physics Institute of the Ukraine Academy of Sciences and at Chernovitsky University found that cones of different sizes were shown to have significant torsion generating effects. From this research, it was determined that: the best passive torsion generators were formed by cones that were shaped into a "phi" ratio of 1 to 0.618.

What this research shows is that torsion waves are "phi" spirals, because the cone shape that duplicates this pattern harness the waves most strongly.

In fact and most interestingly, Dr. Bogdanov performed many laboratory studies on medicinal preparations, fungi and so forth while he was conducting research in Kiev. Dr. Bogdanov studied how matter interacts with different torsion-field patterns created by various pyramid shapes, and during these investigations he also studied how consciousness (intent)would affect the energy fields.

The studies were performed by a source field torsion-wave detecting device that he designed which allows its user to detect peculiar properties in a particular geological feature (geopathic zones), energetic activity in the Earth's crystalline core as well as the torsion effects of various buildings including pyramids.

These results were discussed on the Conference on Problems of Harmonization of Mankind, held in Kiev, and were subsequently published.

Further research showed that when a pyramid was utilized in industrial procedures the source field torsion-wave-focusing properties of the pyramid structure had a direct effect on how crystallization takes place. In one exciting example, industrial diamonds that were synthesized within the pyramid turned out harder and purer than they would normally. This suggests that the torsion-wave component is of central importance in the forming of chemical bonds to create a crystal.

Dr. John DeSalvo has been responsible for much of the recent resurgence of interest in the pyramid research of Joe Parr who has over 40 years experience as an electronics engineer and also holds a law degree.

After Parr's connected with George Van Tassel in the 1950s, who told him about the pyramid experiments of Pat Flanagan and the sharpening of razor blades in a scale model Giza pyramid structure Parr went on to begin studying pyramid-related phenomena. First with stationary pyramids then later with rotating (spin/torsion) pyramids. The pyramids he used in his research could be made of nothing more than four horizontal rods forming a base and four vertical rods forming the edges.

In his experiments he would place sources of radio waves, magnetic fields, ion radiation or radioactive material inside the pyramids, then measure their strength outside the pyramids. From this study, he measured a spherical energy field surrounding any pyramid structure.

The exact center of this sphere exactly corresponds to the position of the so called "Queen's Chamber" in the Great Pyramid of Giza. Materials in this location will still be measured at full potential, however measurements taken outside the energy sphere show a 1 to 3 percent reduction in the amount of measurable energy.

After over 13 years of detailed study of these phenomena, Parr found that a negative ion generator strengthened the source field torsion-wave area of influence, causing it to shield and hold in even more energy than before. Specific sound frequencies such as 51.5 hertz could also be used to strengthen the sphere.

Over the course of 20 years of measurements, Parr determined that the strength of this energy field changes with the 11-year sunspot cycle, and expands and contracts with the phases of the moon.

These observations show that the spherical energy field is a static source field torsion-wave structure that gathers around the pyramid, and is strengthened by absorbing dynamic torsion fields such as the sound frequencies and the negative ions.

Further analysis by Parr determined that the phi ratio was very important to these energy fields as well. Parr found that a form of "virtual" clock would begin counting at the time that the pyramid was first set in a certain position.

This meant that once the pyramid was placed in a fixed spot and aligned with true north, the source field torsion-wave field surrounding the pyramid would gradually become stronger and stronger in its ability to contain the energy fields inside, and the rate of growth for the energy bubble was directly proportional to "phi".

Parr's experiments were abruptly disturbed on December 4, 1979, when the spherical energy orbs around the pyramids started rapidly disappearing on all but one experiment for an unknown reason. His sensors all showed that the electromagnetic and radioactive sources inside the pyramids were suddenly able to flow without interruption into the surrounding space.

Years later, Parr was very surprised to find out that the stream of X-rays from the center of our galaxy had abruptly shut off that day, and the anomaly was widely noted by astronomers.

Other pyramid-energy shutdown events documented by Parr also corresponded precisely with drop-offs in our galaxy's X-ray emissions, though he was unaware of this connection at the time the measurements were made.

This is very interesting, as it shows that the center of the galaxy is actually a primary source of in streaming source field torsion-wave energy.

About nine days after Dec. 4, 1979, the spherical energy fields started to return, yet all but one pyramid had lost the original energy strength of the orb, which had slowly accumulated over time according to the "virtual clock" of the phi radio.

The only pyramid that did not lose its energy field throughout this entire time period was a pyramid that was rotating by a mere 5 degrees every 10 days.

As Parr allowed this particular experiment to continue running, he found that the strength of its energetic orb continued increasing, eventually surpassing all of his other stationary pyramids.

It seems that the slight rotation caused the pyramid to absorb a small but measurable amount of source field torsion wave energy that would otherwise be travelling straight down and or straight up with the gravitational field.

After Parr saw that only the rotating pyramid survived the galaxy-induced "blackout" of December 4, 1979, and somehow the rotation caused it to eventually harness more energy than all the others he realized how important "spin" was.

Not surprisingly, Russian scientists such as Kozyrev had already discovered the same fact.

After working on various ways to rotate pyramids, and he found he could strengthen their energy fields even further by passing them through alternating magnetic fields as they rotated. This allowed him to reach levels much higher than the 1 to 3 percent shielding for a stationary pyramid. As he reached these higher levels, he also noticed that there would be a reduction in the weight of objects inside the pyramid as well; gravity was now also being shielded if the pyramid was rotating in an alternating magnetic field.

As he experimented more and more he found that when the rotating pyramid to reached a certain speed while he was also bathing the surrounding air with atomic particles such as ions, there would be a "pinch-off point" or singularity where the shielding would reach 100 percent.

At this point the pyramid's energy field would completely shield off all electromagnetic, radioactive and gravitational energy. Rotation alone could create a 50% shielding effect when the proper speed was attained, but the atomic particles were required to reach the 100% pinch-off point. Sunlight could also be used as the source of atomic particles to achieve complete shielding around the spinning pyramid.

While amazing to most, it shouldn't surprise us that once the 100% shielding level was attained in Parr's experiments, the pyramid would temporarily disappear from our known "three-space" reality.

The Russian pyramid studies of Dr. Golod and Dr. Bogdanov as well as Joe Parr's work beg the question why have we not heard more about this? Where is the media coverage? Well they have and even though some information has now come to light in reports from CNN, BBC, AP, NY-Times. The work of the Russian teams have been consistently blocked by mainstream science journal editors. Unfortunate but not surprising.

What is also interesting is how the pyramid consciousness is raising as we approach the end of the current time and begin to experience what some call a "quickening". In fact hundreds of thousands of people visit the largest pyramid near Moscow every year. Including politicians, media personalities and a group of Tibetan monks who proclaimed that it was a "perfect place". With the documented improvements to almost every facet of human existence it is no wonder that mainstream industry including big oil and big pharma are trying to keep a lid on a simple technology that could totally transform the physical, mental and ecological health of humanity. In fact I believe, as many others including Dr. Golod do too, that these pyramids and more like them can actually save the world.

Notice we didn't even talk about the extra terrestrials and the fact that they operate pyramid shaped vehicles like the one seen hovering over the Kremlin by thousands of people on the night of December 18, 2009 as reported by Pravda.

Chapter 6: Build Your Own Russian Pyramid

DIY Russian Pyramid: How to actually build one.

So the moment has come.

Its time to take the "bull by the horns" and actually build your own pyramid!

By now you realize that the established "experts" haven't a clue as to what is going on with the Great pyramid, the Nubian pyramids or the Russian pyramids and actually only care about keeping their status as experts. So who is going to

discover what powers the pyramids really hold?

The basic formula for building a pyramid based on the Russian model is as follows:

Calculated ratio of the slant edge to base must be SQUARE_ROOT(Phi + 3.118) = 2.1763. i.e base is 1, slant edge (long side of triangle) is 2.1763.

For example if you want to make a Russian Pyramid with a base of 2 meters then the slant edge is 2 * 2.1763 = 4.352 meters. For a solid side Russian Pyramid of base 2 meters you need to make four triangles of sides 4.352 meters, 4.352 meters, 2 meters, and a square of 2 meter by 2 meter for the base.

You might also want to use the:

Ratio of the overall (perpendicular) height to the base of

SQUARE_ROOT(Phi)*Phi = 2.0581 to calculate the pyramid sides.

For example if you want to calculate a Russian Pyramid of say overall height 3 meters then using the height to base ratio of 2.0581 the calculated base is 3 / 2.0581 = 1.458 meters

The calculated ratio of the slant angle (long side of each side triangle) to base (short side of side triangle) must be SQUARE_ROOT(Phi + 3.118) = 2.1763. therefore if the base is 1, slant height is 2.1763 so, if you want to make a Russian Pyramid with a base of 2 meters then the slant angle is 2 * 2.176 = 4.352 meter.

Using the slant angle to base ratio of 2.1763 you can calculate the slant angle to be 3.172 meters. Therefore to make a Russian Pyramid of 3 meters overall height you need four triangles with sides 3.172 meters by 1.458 meters, and a square base of 1.458 meters.

Special Thanks to David Kwan for his Russian Pyramid math explanation.

NOTE: The above math is based on research looking at Dr. Golod's 144ft Russian pyramid and the idea of stacked Phi spheres that decrease in size by the Golden Mean giving the steep sided shape. (See Page 29 for more detail.)

The above is the recommended method based on Dr. Golod's work, however there are different options that I include here for your information and experimentation as there is some argument in regard to what math Dr. Gold was using to construct his pyramids.

DO NOT MIX THE METHODS! They each output slightly different shaped pyramids. It is up to you to decide which you prefer and remember, ALL Platonic solids will gather and concentrate torsion energy for your use and benefit. Dr. Golod felt his shape was more effective in broadcasting energy outward whereas the Great Pyramid at Giza concentrates the energy inside the pyramid.

Alternative Method: Decide on the size of the square that will form the pyramid base. For example, say you want a 5 foot base. Now you know the size of the

four sides of the base. Each will be 5 ft. You need four pieces of whatever material you are using; copper pipe, wood, pvc pipe, etc. Now to calculate the height. You take the base length (5 ft) and multiply that by 1.618 (golden ratio) to get the height of the vertical pieces (slant angle). In this case it would be 5' x 1.618 = 8.09'. 8.09 ft is the length of your vertical pieces. You need 4 of those.

Now you can create your square base (easy) and somehow (depends on what material you are using, so get creative) attach the vertical poles to the corners of the base square, such that they all meet at the top. A triangle has 3 angles and 3 sides giving a total of six dimensions. However, you only need any 3 of these to define it. We have the lengths of the three sides, so if joined properly, the angles should come out to 71 degrees at the bottom where the base horizontal pole/bar meets the vertical pole and 36 degrees for the top where any two vertical poles meet.

Before you start working on your pyramid you need to decide a few things:

1. what kind of pyramid are you looking for: indoor or outdoor
2. what material you will use, drywall and tape, oriented strand board (OSB) or plywood.
3. what size pyramid you are ready to build: bookshelf, living room, back yard or out in the back 40.

All the decisions above will affect how you end up building and what tools you will need. So, think it through and then skip to the appropriate chapter to choose what kind of pyramid you will be building.

My first "proof of concept" all wooden Russian pyramid

As I became more and more excited about the potential of Russian pyramids I started building prototypes and models. Interesting even the small ones had a noticeable calming effect, just being around pyramids puts one in a deeply peaceful state.

For the first prototype I used triangular shaped pieces ripped off a piece of 2x4.

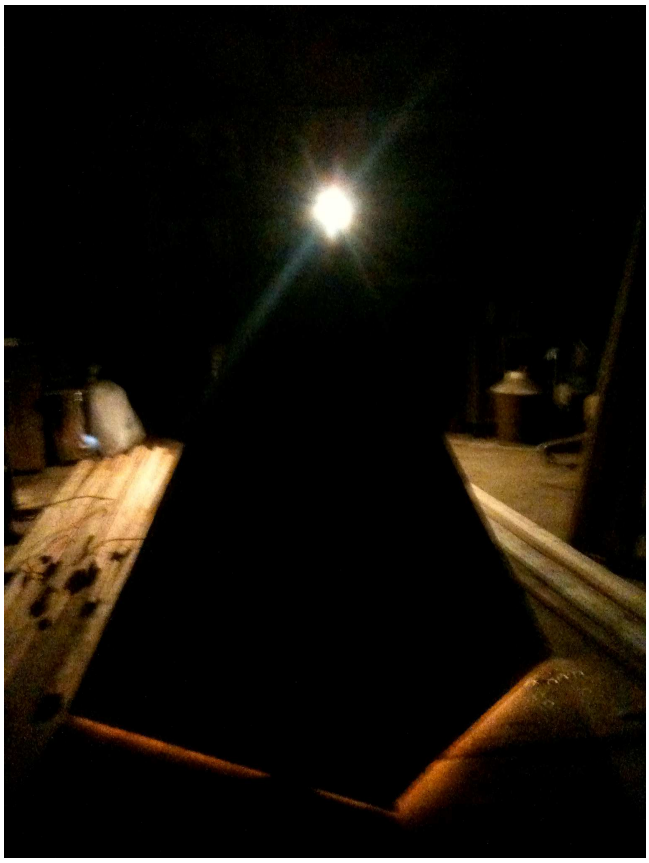
After I had the base sized properly I added the "pyramid bits".

After I had the frame glued together I added the outside coving made of "door skin" 1/8th inch mahogany plywood used on interior doors.

As soon as I aligned this pyramid with true north I immediately felt a decrease in stress. Was it psychosomatic? Based on scientific research coming out of the former Soviet Union I now know it is a real, if subtle, effect of being near a Russian pyramid. Even a small one like the one shown in the previous pictures.

Now to build a bigger one!

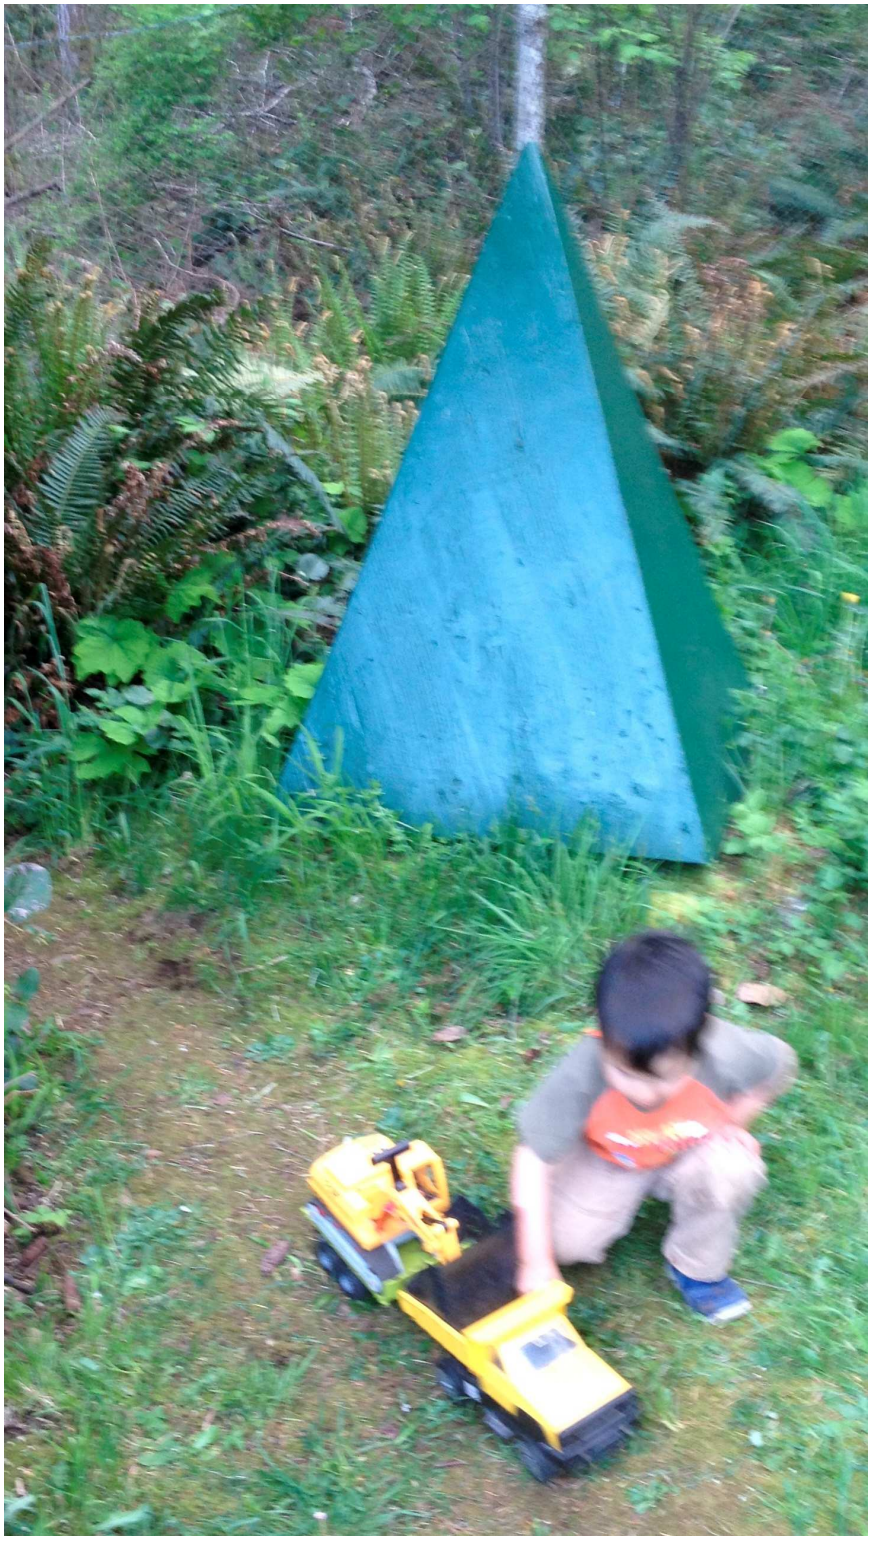
Excited by my initial success I quickly built a larger wooden pyramid which worked amazingly well considering I didn't get my angles quite right. (Thanks to Patrick Flanagan for pointing that out!)



Here are some more pics of the outdoor pyramid which had some interesting effects.

- Grass doesn't really die underneath it even without sunlight.
- Plants growing near the pyramid appeared to grow faster and greener than the same type of plant growing further away.
- My sleep was deeper, better and more restful.
- My relationship with my wife improved.
- My wife became pregnant with twins after 5 miscarriages.
- Our 3yr old son became much calmer and loves playing near the pyramid

Of course all of these things may be in my mind but SO WHAT! I still get the benefits even if I am just imagining it!

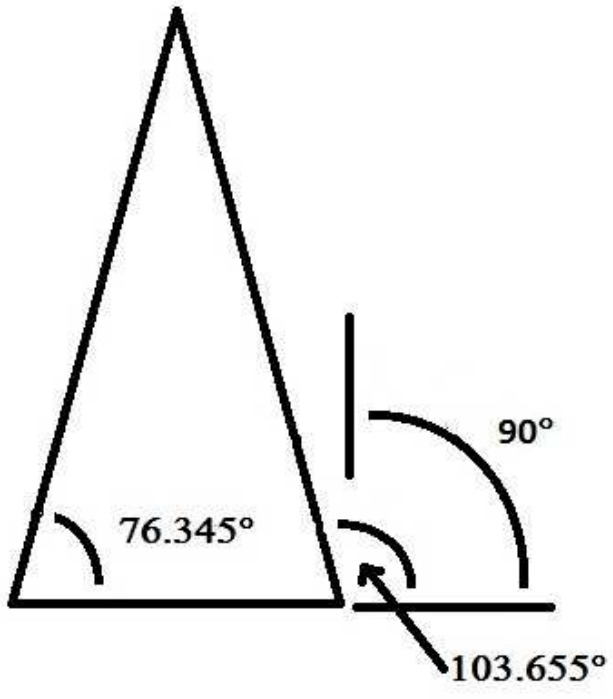


Gyprock DIY Russian Pyramid

Basic indoor pyramid to sit beside

Choose your size based on the logarithmic progression from the 144ft pyramid constructed on the Novorizhskoye Highway outside Moscow in Russia. For example 144, 72, 36, 18, 9, 4'6", 2'3", 1'1"1/2 etc. Once you decide on the size then decide drywall (cheaper and easier) or plywood/OSB (remember most OSB has formaldehyde and must be very well sealed after construction).

Lets start with a 4'6" drywall pyramid. For this you will need two sheets of 1/2 inch drywall (about $12 most places) a small tub of drywall compound, tape measure, a razor knife or jigsaw and a straight edge (a straight 2x4 will work fine for this application) a pencil, a 12' plastic "speed square" an angle transferring tool, some scrap cardboard, masking tape, putty knife, drywall tape (the mesh type) some 80 grit sand paper and a can of whatever color latex paint you would like.



Lets Say you have decided to build the 4'6" high pyramid. Once you have assembled your "ingredients" make a cardboard template so that the bottom of the triangle is 2.1864 ft square then calculate the "slant angle" (which gives the long sides of the triangles).

Therefore the two long sides will be 2.1864ft x 2.176 = 4.757ft for the sides of the triangles. Cut four of these pieces, tape them together and tape them together to make sure your angles are right. Double check the height. The inside angle should be 76.345, the angle from the ground to a side should be 103.655 degrees.

IMPORTANT NOTE!
From the point of view of the “Principle of Correspondence”, materials other than white quartz or glass are entirely suitable material. Gyproc, plywood, even timber has a fairly low density and to obtain positive results but needs to be given an appropriate coating to protect it against rain and snow and improve its surface characteristics. To this end both inner and outer surfaces need to be covered with good-quality paint mixed with powdered granite or preferably quartz.

Once you have assembled your cardboard pyramid and tested the angles then take the sides apart and lay them out on the drywall. Use as many of the factory edges as you can when doing your layout. Once you have found the optimum layout for the four sides, cut out the four drywall triangles and tape them together in a pyramid shape. While they are taped together run a knife down the crack trimming a bit of material off each side till you get a good fit that comes to a sharp edge. Don't worry if you make a mistake or two here. You will be filling and taping the edges anyway.

After getting the angles figured out take the masking tape off one side lay down a thin film of drywall compound on each side of the corner to about 3" back from the corner. Pre fold the appropriate length of drywall tape and push it onto the wet joint compound once it is well stuck to the pyramid corner use the putty knife to lay on another thin layer that just covers the tape and thins to nothing as it goes away from the corner. Repeat on the other corners being careful about keeping the pyramid aligned. Let dry for the recommended amount of time and then sand down any rough spots and create as close to a sharp corner as possible from top to bottom of the pyramid.

Some amazing people can do a drywall corner joint in one pass but I certainly can't! So for us mere mortals expect to go over all your joints a few times to get a nice looking corner. Once you are happy with the corners and the pyramid is fully dry! Carefully carry the whole pyramid to a well ventilated area and paint it whatever color you chose. Make sure you use latex water based low VOC paint otherwise it will smell up your house.

IMPORTANT NOTE!
From the point of view of the “Principle of Correspondence”, materials other than

white quartz or glass are entirely suitable material. Gyproc, plywood, even timber has a fairly low density and to obtain positive results needs to be given an appropriate coating to protect it against rain and snow and improve its surface characteristics. To this end both inner and outer surfaces need to be covered with good-quality paint mixed with powdered granite or preferably quartz.

Once the paint is dry I suggest finding a piece of carpet (carpet stores often sell scrap or sample pieces at low cost) that fits the base of the pyramid as it may leave gypsum behind if someone tries to slide it along the floor.

Now that you have your pyramid assembled you need to align it to galactic north as close as possible. This is a crucial step because pyramids must be properly aligned to work! This has now been proven scientifically (see included PDF files if interested). In order to do that we will need at the very least a smartphone with a compass but preferably a good quality surveyors compass.

Click here for detailed instructions using a good quality surveyors compass or keep reading to do it using Google Earth.

Align your Pyramid Using Google Earth

Open Google Earth and zoom in on the Great Pyramid of Giza in Egypt. Its north side of the Great Pyramid is precisely facing true north within 1/10 of one degree, then left click the "N" icon of the circle above the directional navigational disc (which is located on the upper right of the Google Earth screen when you place your cursor in that region). Google Earth says

this will orient the screen image to true north. Check the west side of the Pyramid it should run exactly parallel to the left side margin of your screen.

You can take a Google Earth screen shot of your home and click the "N" icon in the upper right of the screen (just above the directional disc hub with arrows) to orient the screen to true north. Now you can save the image and print out the screen shot of your home, properly enlarged to fill out most of the entire printed page.

Now you know that the left hand margin of the paper is orientated to true north and you can draw a series of parallel lines through your house (use a T Square, tape down the paper, and follow normal drafting technique) to indicate the true north-south axis. Try to draw your lines through locations along the edge of the roof which can be easily identified from the ground and allow you to drop a plumb line down to ground level and mark the exact location on the ground (with a stake) or mark the plumb line on the house itself.

You could also extend your drawn parallel lines out beyond the house roof line to cover your front and back yard and use bushes, or trees, fence posts, or other fixed objects on your property to run a string or run a laser beam to show you where the north-south axis runs from one side of your house to the other. If you set up your outside markers to line up with some of your windows, you could run a laser beam along the line of the outside markers and run the beam into your window (at night) and mark the beam's window entry point and where it lands on a wall. You could then use a string (or laser pen) inside the house to connect these points and mark out parallel lines throughout the room so you would know exactly where the north-south axis lays in any room of your house. When you're ready to set up your pyramid, you can use these pre-determined north-south markers to align your pyramid precisely along the north-south axis.

Thanks to www.educate-yourself.org!

Basic Indoor all wooden pyramid

To sit beside or inside if you build it big enough.

Lets start with a 4'6" plywood pyramid. For this you will need two sheets of 1/2 inch good one side plywood (about $25 most places), tape measure, a small bottle of white or yellow construction glue Titebond or Gorilla glue are recommended, a skill saw or table saw with helper, a straight edge (a straight 2x4 will work fine for this application) a pencil, a 12' plastic "speed square" an angle transferring tool, some scrap cardboard, masking tape, 80 grit sand paper and a can of whatever color latex paint you would like.

Lets say you have decided to build the 4'6" high pyramid. Once you have assembled your "ingredients" make a cardboard template so that the bottom of the triangle is 2.1864 ft then calculate the "slant ange" (which gives the long sides of the triangles).

Therefore the two equal sides will be 2.1864ft x 2.176 = 4.757ft for the sides of the triangles. Cut four of these pieces, tape them together and tape them together to make sure your angles are right. Double check the height. The inside angle should be 76.345, the angle from the ground to a side should be 103.655 degrees.

Once you have assembled your cardboard pyramid and tested the angles then take the sides apart and lay them out on the plywood on the good side. Use as many of the factory edges as you can when doing your layout. Once you have found the optimum layout for the four sides, cut out the four plywood triangles using a blade angle of 45 degrees (use your angle finder and speed square to make sure your angles are as exact as possible). When you cut make sure that your angles are such that when the four triangles are glued together the angles are going to line up and give you a good glue joint. Make a cardboard test pyramid first!

While you are building your wooden pyramid properly align your cardboard pyramid. Then it will be working, keeping you calm, reducing stress, improving your dopamine levels while you work. I also suggest cutting the bottom of your plywood triangles so they sit flat (which really means that they are slightly angled so that they are flat when each side is angled in) so you can glue on a base if needed.

After getting the angles figured and the side pieces cut use the masking tape to "dry fit" everything and make sure all the angles are right. Once everything lines up nicely you are ready to glue. Starting with one joint apply a bead of glue to both angle faces (the ones you cut before with the skill saw) and slide them together. Don't worry if glue squeezes out this is better than not enough glue! Once the first joint is together use lots of 2" masking tape to hold the joint together then continue to glue and tape the joints till the pyramid is fully assembled and taped together. Make sure at this point that all the angles are still correct as this will be the last time you can adjust anything.

Note: You can use deck screws to hold the pyramid together while gluing but remember to remove them before use! Also when I made my pyramid I drilled through both pieces of plywood in 6 places along each corner and then inserted a piece of dowel with glue, then cut it off flush when dry. This made me feel better about the stability of the corners since mine is an outdoor pyramid.

Once the glue is dry (don't rush this step! Follow the manufacturers time for drying or more!) use the sandpaper to sand off any drips and make the corner nice and sharp. If there are any gaps, cracks or other defects they can be filled with wood putty or drywall compound and sanded flat. If you have kids, roommates or other people that may be rough with such a cool object you might want to put a plywood base onto it as well for extra strenght.

For this put the pyramid on a remaining piece of the original plywood, mark the size and cut so that the angle lines up with the side angle. When you have your base piece ready glue it to the bottom of the other four sides and wait for that glue to dry too. Then patch any imperfections and after you are happy with the overall finish of the pyramid you can varnish it (latex based Varathane over wood putty or if you did perfect joints) oil it (tung oil or boiled linseed oil same as the varnish) though with any finish make sure to test the smell with anyone who is going to be exposed to it so that you can be sure that no one is going to react negatively when you bring the pyramid into the living room.

After you have decided on a finish, carry the whole pyramid to a well ventilated area and apply whatever treatment you chose. Make sure you use latex gloves, water based products or at least low VOC paint otherwise it will smell up your house.

IMPORTANT NOTE!
From the point of view of the “Principle of Correspondence”, materials other than white quartz or glass are entirely suitable material. Gyproc, plywood, even timber has a fairly low density and to obtain positive results needs to be given an appropriate coating to protect it against rain and snow and improve its surface characteristics. To this end both inner and outer surfaces need to be covered with good-quality paint mixed with powdered granite or preferably quartz.

Once the finish is dry I suggest finding a piece of carpet (carpet stores often sell scrap or sample pieces at low cost) that fits the base of the pyramid and gluing it to the bottom of the base piece as it will make it quieter to move around and won't scratch hardwood floors if kids start sliding it around.

So there you have it the basic plans for building your own plywood pyramid

Before you use the pyramid remember to align it to true galactic north by following the instructions from earlier in the book and ideally keeping it away from all metal and electronic smog as best you can. Plants will thrive near your pyramid and shelter it from the disruption caused by modern gadgets and electronics. However for maximum effect you should really consider building a full size, weather proof outdoor pyramid that can be place as far away from man made objects as possible. This is what Dr. Golod suggested and his research has shown this to be very effective in boosting the pyramid effect.

Another option for outdoor pyramids is using PVC pipe with Plexiglas corner connectors, fittings and covering it with any type of waterproof covering. The most important point with all the designs is that one must NOT use metal fasteners or polyethylene plastic both of which will reduce or completely eliminate the power gathering and harmonizing that the pyramids are capable of.

Interestingly a frame pyramid will actually perform well too.

Now that you have the angles and have made some smaller simpler test pyramids its time to "share the love" and go out and build a ton of pyramids!

I have PVC pipe pyramids, plywood pyramids and am now working on large timber frame pyramids using dowels and glue to hold them together. The more pyramids one has around the better the energy and the more pyramids in the world the better chance we have of changing it!

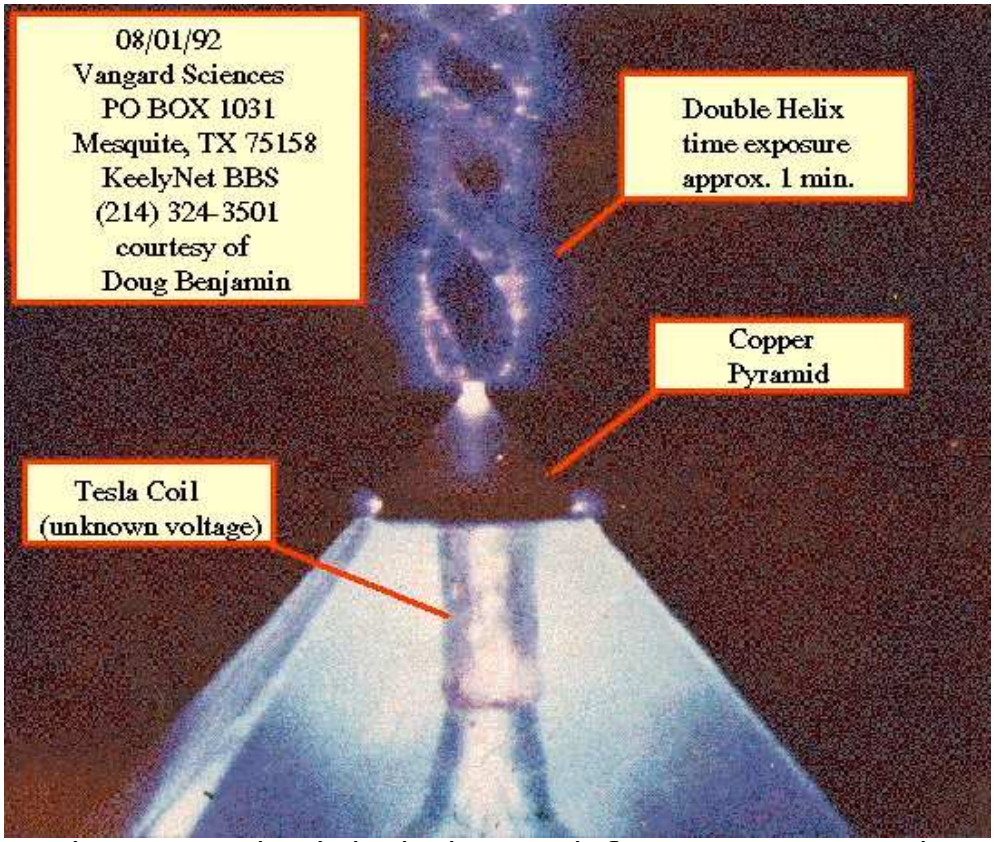
This file is a short description intended to describe a drawing listed on KeelyNet as Hardy1.GIF.

The Double Helix Pyramid Beam



In 1986, I (Jerry Decker) had the good fortune to attend a Crystal Conference held in Irving, Texas. At that meeting, there were many new age types, yet two presenters really caught my interest.

Mary and Dean Hardy of Allegan, Michigan lectured on the ongoing

work she and Dean had been carrying out with respect to pyramid energy. At first, I had much trouble accepting what I was hearing but when a slide was shown of a pyramid emitting a double helix beam of energy when excited by a Tesla coil, I was hooked.

Mary frequently referred to an energy which she called "TACHION". I asked for clarification and she said the word was coined by Kenneth Killick to describe an effect he had investigated involving "tacky ions". This is by no means the faster than light particles known as TACHYONS. Kenneth has the ability to see and manipulate energy of various sorts and worked with the Hardy's and others for many years.

After that lecture so many years ago, Mary and Dean have become good friends and valuable contacts. When they visit Dallas, they often stay at my house and we discuss many subjects.

Mary and Dean have written two excellent books, Pyramid Energy and a revised edition available from them at the address at the end of this file. It is one of the best books on pyramid energies that I have read primarily because it involves the use of energy to form what has been termed "Standing Columnar Waves". It also deals with patterns that seem to influence energy for specific effects.

Doug Benjamin is an energy researcher who has investigated geometric angles derived from Egyptian sources and actual experiments. These angles are basically 3 sided pyramids (2 dimensional) which correspond to specific organs of the body. When properly used, they can improve the energy level and thus the health of the targeted organ.

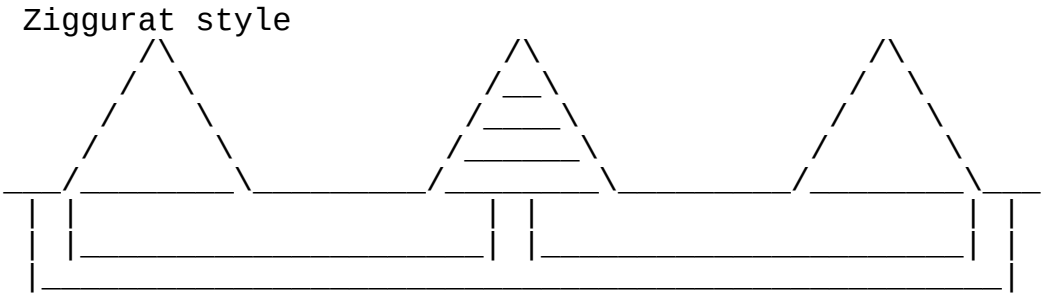
Doug has known and worked with the Hardy's for many years and had a photograph of the pyramid slide that so fascinated me. He kindly gave us a copy of this photo for our archives. Thanks to the

efforts of Ron Barker, we now have this image scanned in and available for study and hopefully duplication.

An interesting story about Doug happened at a Global Sciences Congress in Denver in 1989. He and I were talking about several subjects and he pulled what appeared to be a ceramic tile from his pocket. Doug asked if the tile looked familiar and I remarked that it looked like a heat tile from the space shuttle.

Doug said it had an unusual history in that he had "bribed" some Egyptian government officials to allow him access to a non-tourist area. That area was of much interest to him as it consisted of 3 pyramids which turned out to be connected by a single tunnel.

He then drew a diagram of it and asked what I thought it might represent.



Doug said the pyramids on the left and right were normal pyramids while the center one was a ziggurat (stepped). Now if energy was in fact somehow received or transmitted by such a stepped pyramid, it would function as a lens commonly termed a FRESNEL.

Therefore, it appeared to be some form of SCALAR INTERFEROMETER with the left and right pyramids acting as either transmitters or receivers and the center acting as a concentrating lens or targeting lens.

These tiles lined the connecting corridors between all three pyramids and would seem to be some form of channel for a very high intensity energy.

Interestingly enough, in Mary and Dean's many trips to Egypt, they have found several interior anomalies in the Cheops pyramid that are commonly known, yet from their research, they have come up with a new twist on what these anomalies were produced by or used for.

I will not go into great detail as it is covered quite well in their fascinating book, however, Mary and Dean feel that the Ark of the Covenant was an energy accumulator that was used in conjunction with the pyramids. They cite a mysterious channel in one large room of Cheops which would perfectly fit the Ark. But the best twist yet is a recessed chamber which is cut into the wall in such a fashion that the Ark would fit directly in the largest lower space. That chamber is stepped in a pyramid type fashion also and is marked with SPIRALLING SCORCH marks that run to the top of the chamber!

Mary and Dean believe that the Ark was charged and placed into this recessed chamber. When the Ark was triggered to release its

accumulated energy, it discharged upwards and formed the spiraling configuration that is now seen as the scorch marks on the wall.

The scanned image of the Hardy1.GIF file shows something quite fascinating with regard to such a comparison of the Ark (Tesla Coil) placed in a pyramid structure to produce this Double Helix spiraling energy emanating from the tip.

The original photo was taken by Dr. J.D. Nelson of the University of Wyoming. From the limited information we have concerning how it was done, the pyramid shape is made of soldered copper sheet, possibly with a crystal placed at the apex.

The Tesla coil is placed so that the electrical emission occurs at the 2/3's power point of the pyramid. We do not know the voltage though we think it is approximately 200,000 Volts.

Dean says he thinks that the light curtain that projects from the pyramid due to the Tesla coil arcing is NOT acrylic sheet but that the pyramid is supported by acrylic columns.

It would seem that acrylic sheet would help to concentrate the ions and further intensify the energy emissions, so there is room for experiment here.

Also note that this photo was taken in a perfectly dark room and with a time exposure of about 1 to 3 minutes, (our information regarding the technical details is very limited).

Some other points of speculation about possible ways of duplicating and or optimizing this phenomenal experiment :

1) Use a tunable Tesla coil and try various frequencies for different or more pronounced effects.

2) Try other types of metal than copper or even use alloys or layered sheets.

3) Try a crystal on the apex, various types and/or shapes.

4) Try to redirect or channel the double helix energy through a wire or conduit.

5) Arrange to bombard plants to see if the energy is beneficial or destructive to living tissues (this might serve as the ULTIMATE MWO, see MWO1 on KeelyNet).

6) For those familiar with Reich's Orgone Energy, such a hybrid might produce bizarre and even hazardous effects, so be careful.

Just one word of warning, we have information that leads us to believe that crystals used in conjunction with high voltage energy sources might be hazardous if the apexes of excited crystals are pointed towards living tissue, so TAKE THIS AS A WARNING!
We urge further experiments and sharing of your findings in such areas.

CONCLUSION:

On the effectiveness of the use of “energetic water” structured by quartz crystals.

An experiment was carried out to examine the effect of “energetic water” (EW) obtained by placing varieties of quartz crystals in boiled water. The following types of silicon dioxide were used: clear, rose, smoky, an opaline porcelain variety – cacholong and a cryptocrystalline variety – orange chalcedony (cornelian).

For the experiment blood serum obtained from healthy individuals and patients with ischemic heart disease, diabetes and chronic persistent hepatitis was used. Drops of EW were introduced into drops of serum, then the samples were dried under controlled conditions and examined under the microscope.

The figures below show the initial crystallograms of a healthy individual and of the patients, and those obtained after the addition of EW. As can be seen from the data given, the blood serum of healthy

individuals differs strongly from that of disease sufferers. Following the addition of EW the crystallogram changes radically. The serum of a healthy person presents crystals with a pattern like frost on a window (dendrites). After the introduction of drops of EW into the serum of the patients, it also changed its structure, coming close to the pattern observed for a healthy individual. Dendrite crystals appeared in it too.

SUMMARY:

Energetic water improves the structure of the blood serum of both healthy and diseased individuals. The effect discovered can probably be interpreted as follows: quartz is one of the varieties of mineral very common in nature (up to 76%). It is a a superb piezoelectric radiator with the aid of which it is possible to transform high-frequency electrical oscillations (piezo-effect up to 50,000kHz). Besides this, quartz gives off ultrasound and also reacts “responsively” to infrared radiation typical of living biological systems.

Blood serum is a complex biological colloid that consists of 90% water. The remaining 10% consists of globular proteins and liquid crystal inclusions (fats, cholesterol, triglycerides) that react to high-frequency currents and to infrared radiation. The crystal lattice of quartz is hexagonal; water also has a six-sided packaging,while proteins are a sort of “aperiodic crystal” . The introduction of EW into human blood serum is accompanied by an improvement in its structure, which can be explained by the effect of resonant frequencies. The structural regeneration of blood serum from a sick individual is observed. It follows that the regular ingestion of EW furthers the normalization of metabolic processes in such biological systems as human blood serum. Thus the use of EW is advisable for both prophylactic and therapeutic purposes.

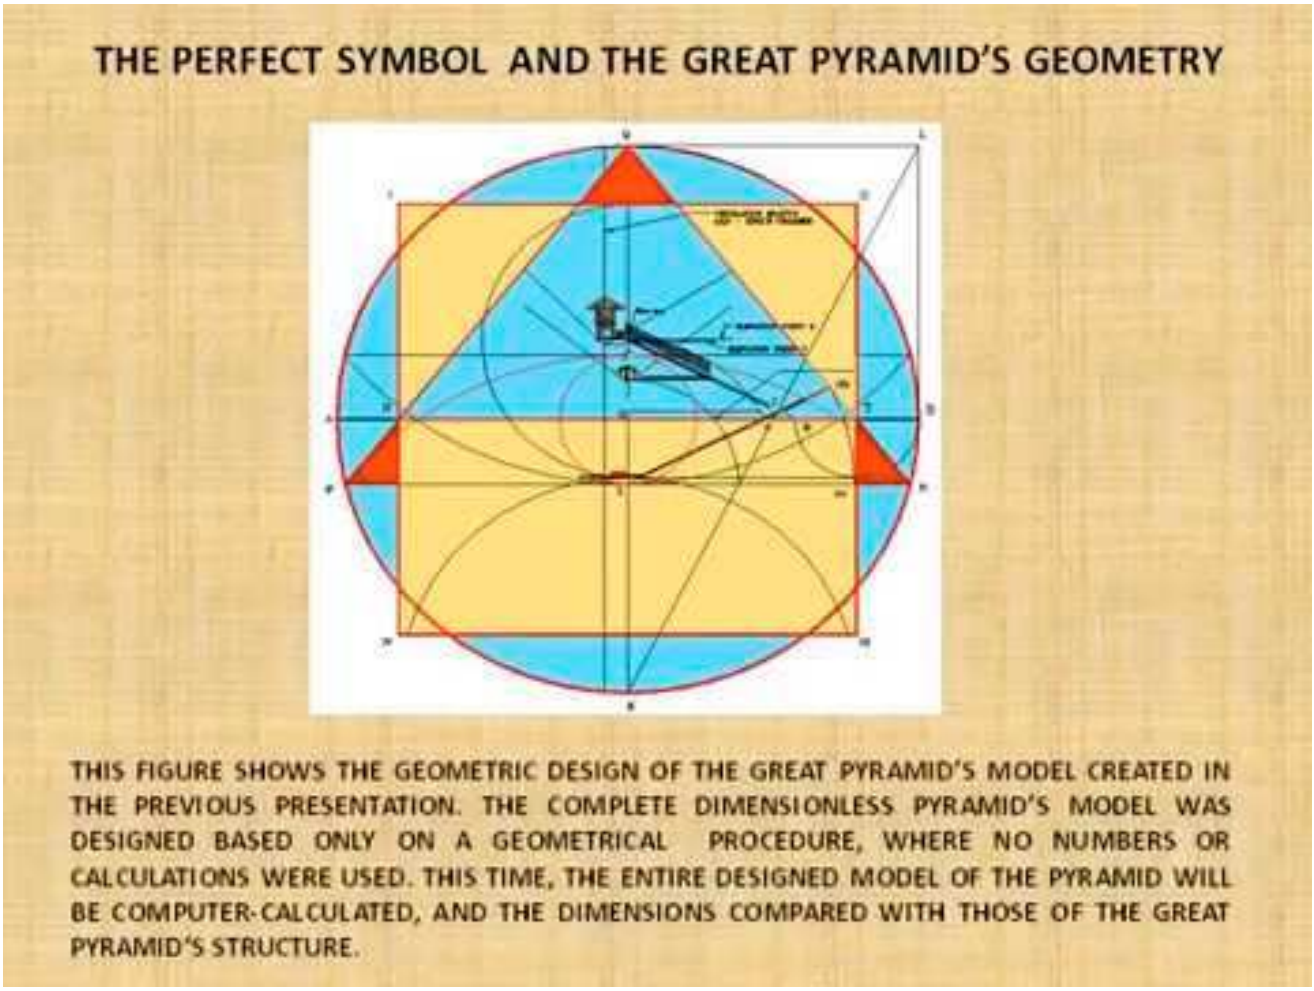
The Samuel Laboy Interpretation of the Geometry of the Great Pyramid

A Civil Engineer from Puerto Rico, Samuel Laboy, challenged all interested in Egyptian Pyramids to analyze his discovery of the geometric principals of the Great Pyramid's structure, using no numbers, no calculations, and even no reference to the Great Pyramid.

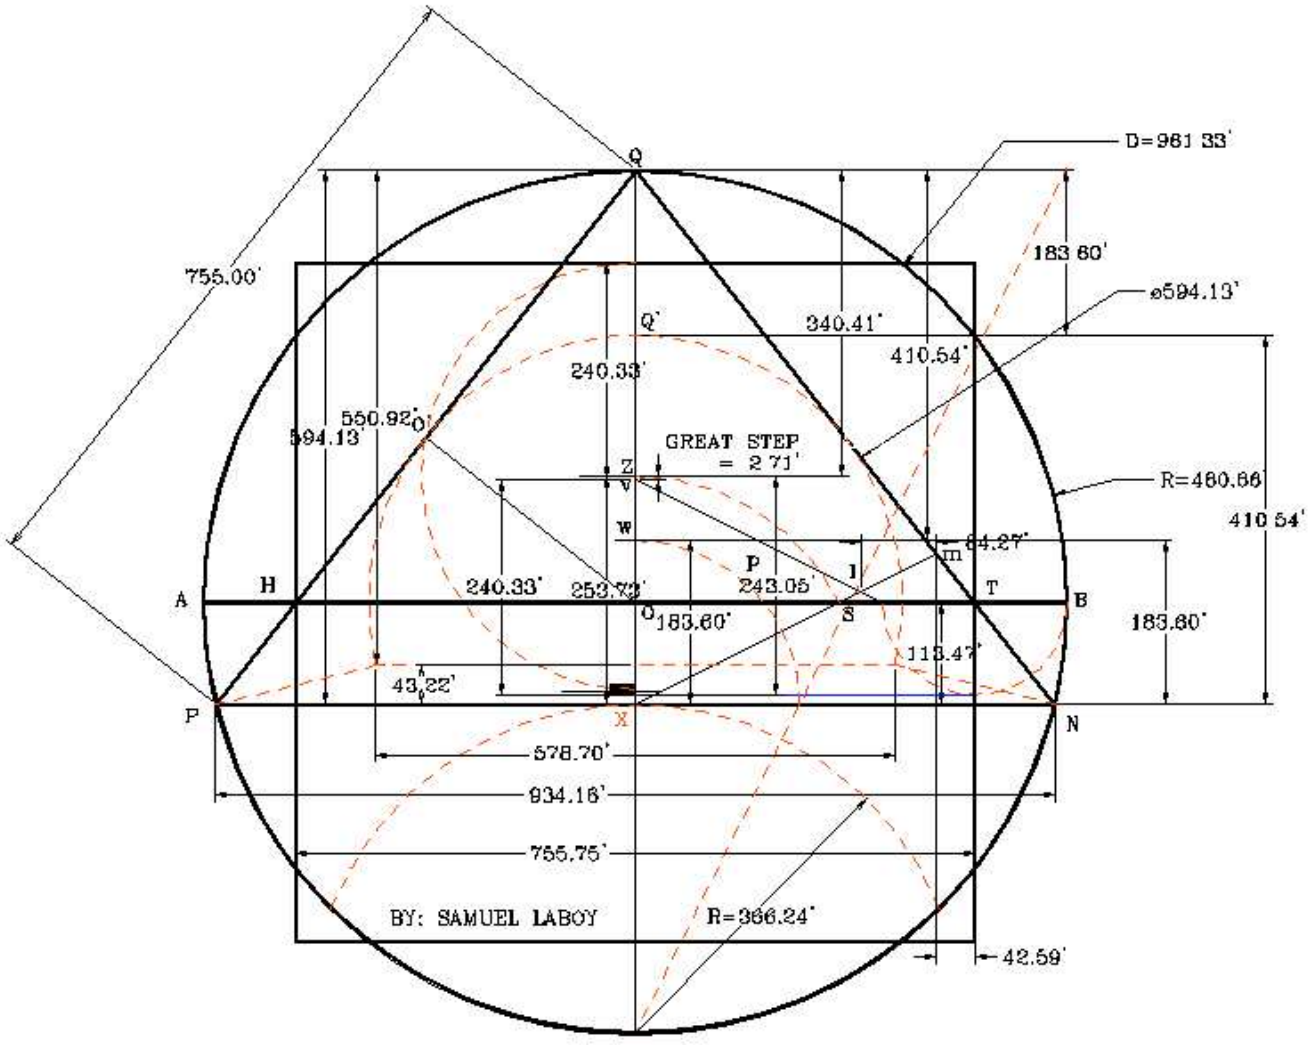
Laboy proves that this is not a theory; it is a fact, it is something real.



THE PERFECT SYMBOL AND THE GREAT PYRAMID'S GEOMETRY
THIS FIGURE SHOWS THE GEOMETRIC DESIGN OF THE GREAT PYRAMID'S MODEL CREATED IN THE PREVIOUS PRESENTATION. THE COMPLETE DIMENSIONLESS PYRAMID'S MODEL WAS DESIGNED BASED ONLY ON A GEOMETRICAL PROCEDURE, WHERE NO NUMBERS OR CALCULATIONS WERE USED. THIS TIME, THE ENTIRE DESIGNED MODEL OF THE PYRAMID WILL BE COMPUTER-CALCULATED, AND THE DIMENSIONS COMPARED WITH THOSE OF THE GREAT PYRAMID'S STRUCTURE.

Anyone of average drawing skill can verify his geometric procedures, in the measurement units of their choice, ether cubits, meters, feet, inches, any unit of measurement. Using nothing more than a sheet of paper, divider (compass) and straight edge (ruler). They will arrive at the same result.

Laboy's purpose is to unravel this 5 millenniums year's mystery of the Great Pyramid's Geometry. The first picture illustrates the geometric configuration of the Great Pyramid's structure, as depicted by Laboy for the model pyramid.



It shows some of the dimensions calculated for the model.

Since the controlling factor for its size is the radius of the circle, set up as the pyramid's height, its entire figure will increase, or decrease, according to the size of the radius which is set up.

When Laboy finished his dimensionless plan for the model pyramid, he set the size of the radius of the circle and calculated the entire model dimensions using only this number.

All calculated dimensions, angles, properties and characteristics of his designed pyramid's model, when compared with the dimensions, angles, properties and characteristics of the Great Pyramid's structure, showed that they were exactly equal in both designs.

Laboy also included the design of the entrance to the pyramid, the Grand Gallery, The Antechamber and the two granite slabs, including the famous "construction boss", the King's Chamber and its five ceilings, the Queen's chamber and the "niche", the subterranean chamber, and even the so called ventilation shafts.

To demonstrate and evidence that both designs are exactly equal, Laboy also presents a detailed and comprehensive analysis between his calculated dimensions and those actually measured by surveyors and Pyramid investigators in the Great Pyramid's structure,

Therefore, the conclusion of his theory is for the first time in history, we have on hands the complete geometric plans of the Great Pyramid. As a result, we are able to measure directly from the designed plan, any distance in the structure.

To further prove his methodology is sound Laboy used the same geometric procedures to design the pyramids of Chephren, Micerinus, the Red, and the enigmatic Bent Pyramid.

Besides, Laboy also discovered that Leonardo Da Vinci's drawing about the Human Proportions appear to illustrate the architectural data required to design the Great Pyramid and that of Micerinus.

It shows that the man in his drawing, when circumscribed by a circle represents the Great Pyramid's geometry. However, when circumscribe by a square represents the data for the pyramid of Micerinus geometry. Also, the cross section of this particular pyramid, superimposed over the man's figure, seems to represent the exact size and location of the Egyptian men's customary pyramidal skirt design.

Patents

Inventor: GROJSMAN V A; PROKOSHENKOV E JA; VORONINA S I; GOLOD A E; GREBENNIKOV A M; IZMEST EV V A; IZMEST EVA ZH A; LAPSHIN V N; FROLOV A V
Applicant: AJA FA; OOO VIZAVI MED N PROIZV
Classification: - international: A61N5/00; A61N5/00; (IPC1-7): A61N5/00
Abstract of RU2152813
medicine. SUBSTANCE: method involves determining sign and power of biological energy field in the area of human pathogenic zones and treating the areas with pyramidal generators energy radiation. The patient is placed into harmonizing energy-and-information field of the main pyramidal generator. The detected pathogenic zone is exposed to concentrated unidirectional field produced in the space between two pyramidal generators arranged in unidirectional coaxial relation to one another. Sign and power of the concentrated unidirectional field are selected depending on the human biological energy field in the region of pathogenic focus in patient body. EFFECT: enhanced effectiveness of treatment course. 2 cl, 1 dwg

APPARATUS FOR EXPOSING BIOLOGICAL OBJECT TO ENERGO-INFORMATIONAL FLUX
RU2149650
5-27-2000

Inventor: GROJSMAN V A; GOLOD A E; PROKOSHENKOV E JA; GREBENNIKOV A M; ZATEEV A A; IZMEST EV V A; IZMEST EVA ZH A
Applicant: MED NPF VIZ; AVI
Classification: - international: A61N1/16; A61N2/00; A61N5/00; A61N1/00; A61N2/00; A61N5/00; (IPC1-7): A61N1/16; A61N2/00; A61N5/00
Abstract of RU2149650
FIELD: biology and public health, in particular, equipment, such as form generators adapted for changing functional state of biological objects. SUBSTANCE: apparatus has three regular metal carcass-type four-angled pyramids of similar geometry, whose apexes are disposed in single straight line. Pyramids are inserted one inside the other and rigidly interconnected through similar metal bearing rods so that spaces of equal size are defined between them. Pin fixed to apex of outer pyramid is extending perpendicular to pyramid bases. Block of equally spaced antennae is secured to pin. Antennae are arranged along circumferential line and provided with emitters. Bearing rods are positioned at an angle of 42 deg to pyramid bases. Ends of rods are fixed to respective apexes of pyramid squares. Length of pyramid members and bearing rods is selected such that ratio of distance between bases of smaller and outer pyramids and base side of outer pyramid is 0.16, and ratio of height of each pyramid and length of its base side is 1.618. Block of antennae has hub allowing block to be mounted for rotation on pin, and array of similar antennae made in the form of bundle composed of three vibrators, which are arranged so as to define carcass-type tetrahedron with three ribs extending from single apex. Ratio of base side length and diameter of circle that is circumscribed by bundle apexes, and ratio of this diameter and length of vibrator are 1.618. Such construction allows energoinformational flux of controlled intensity to be directed to biological object. EFFECT: increased efficiency and enhanced reliability in operation. 3 cl, 2 dwg

DEVICE FOR TREATING BIOLOGICAL OBJECT WITH ENERGY AND INFORMATION

RU2149039
5-20-2000

Inventor: GROJSMAN V A; GOLOD A E; PROKOSHENKOV E JA; GREBENNIKOV A M; ZATEEV A A
Applicant: OOO VIZAVI MED NPF
Classification: - international: A61N1/16; A61N2/00; A61N5/00; A61N1/00; A61N2/00; A61N5/00; (IPC1-7): A61N1/16; A61N2/00; A61N5/00
Abstract of RU2149039
FIELD: medical engineering. SUBSTANCE: device has rectilinear carcass pyramid with a rod mounted on its apex and a set of circumferentially arranged antennas provided with emitting units. The antenna unit has a boss and four carcass tetrahedrons. Each tetrahedron has one of its apices attached to the boss. The tetrahedron heights corresponding to the apices belong to the same rotation plane running in parallel to the pyramid base plane. Pyramid base side is twice as small as the pyramid height. Radius of the circle drawn by the tetrahedrons apices is equal to the tetrahedron side length and four times as small as the pyramid height. The tetrahedrons are mounted in a way that one of the base sides of every tetrahedron is in parallel relation to the antenna unit rotation plane. EFFECT: enabled production of energy and information flow of given power.

METHOD OF IMMUNOMODULATION OF THE NON-SPECIFIC REACTIVITY OF AN ANIMAL ORGANISM
WO9526215
10-05-1995
Inventor: BELIK ANDREI GRIGOREVICH (UA); GOLOD ALEXANDR EFIMOVICH (RU); MISJURA SERGEI VLADIMIROVICH (UA)
Applicant: TOVARISCHESTVO S OGRANICHENNOI (RU); BELIK ANDREI GRIGOREVICH (UA); GOLOD ALEXANDR EFIMOVICH (RU); MISJURA SERGEI VLADIMIROVICH (UA)
Classification: - international: A61N1/16; A61N1/00; (IPC1-7): A61N1/16;- European: A61N1/16
Cited documents: WO9404221 // EP0312452 // DE2503622 // EP0460570
Abstract --- The invention relates to methods of stimulating the non-specific reactivity of an animal organism by the immunomodulating effect and can be used either as an independent or as an auxiliary treatment for acute or chronic

diseases and as a preventive treatment to raise the resistance of the animal organism. The proposed method involves exposing the animal organism to energy by placing it in an energy field generated by one or more pyramids. The source of the energy is the background energy of the environment. When this method is used, the reactivity of the animal organism is raised and its resistance to infection significantly increased.

METHOD OF PRELIMINARY TREATMENT OF SEED FOR PLANTING
WO9511585
5-04-1995
Inventor: BELIK ANDREI GRIGORIEVICH (UA); GOLOD ALEXANDR EFIMOVICH (RU); MISJURA SERGEI VLADIMIROVICH (UA)
Applicant: ABO CENTER LTD (RU); BELIK ANDREI GRIGORIEVICH (UA); GOLOD ALEXANDR EFIMOVICH (RU); MISJURA SERGEI VLADIMIROVICH (UA)
Classification: - international: A01C1/00; A01C1/00; (IPC1-7): A01C1/00;- European: A01C1/00
Also published as: RU2090995 (C1)
Cited documents: EP0312452 // EP0302192 // DE2503622
Abstract --- The proposed method of treatment of seed for planting involves allowing energy to act on the seed and is characterised by the fact that the effect is created by means of an energy field formed by placing one or more pyramids within the seed treatment zone. The energy is drawn from the natural background energy in the environment.

PROCESS FOR IMPROVING THE EFFICIENCY OF CRUDE OIL EXTRACTION AND PROCESSING
WO9512052
5-04-1995
Inventor: BELIK ANDREI GRIGORIEVICH (UA); GOLOD ALEXANDR EFIMOVICH (RU); MISJURA SERGEI VLADIMIROVICH (UA)
Applicant: ABO CENTER LTD (RU); BELIK ANDREI GRIGORIEVICH (UA); GOLOD ALEXANDR EFIMOVICH (RU); MISJURA SERGEI VLADIMIROVICH (UA)
Classification: - international: E21B43/24; E21B43/16; (IPC1-7): E21B43/24;- European: E21B43/24
Cited documents: US2700422 // US2757738 // US2906680 // US2918126

Abstract --- The proposed process for improving the efficiency of crude oil extraction and processing involves lowering the viscosity of the oil. The process is assisted by the action of energy, brought about by placing one or more pyramids in the extraction or processing zone to create an energy field. The energy is drawn from the natural background energy in the environment.

METHOD FOR TREATING OIL AND ITS PRODUCTS
RU2094698
10-27-1997
Inventor: BELIK ANDREJ G (RU); GOLOD ALEKSANDR E (RU); MISYURA SERGEJ V (RU)
Applicant: TOVARISHCHESTVO S OGRANICHENNO (RU)
Classification: - international: F17D1/16; F17D1/00; (IPC1-7): F17D1/16

METHOD FOR OIL RECOVERY FROM WELLS
RU2110672
5-10-1998
Inventor: BELIK ANDREJ GRIGOR EVICH (UA); GOLOD ALEKSANDR EFIMOVICH (RU); MISJURA SERGEJ VLADIMIROVICH (UA)
Applicant: ABO TS (RU); TOVARISHCHESTVO S OGRANICHENNO (RU)
Classification:- international: E21B43/00; E21B43/16; E21B43/00; E21B43/16; (IPC1-7): E21B43/00; E21B43/16
Abstract --- FIELD: oil production industry. SUBSTANCE: this primarily relates to pump-forced oil recovery. According to method, intensified recovery of oil from wells is achieved by reducing viscosity of oil. This is reached by energy influence upon oil through positioning of one or several pyramids at distance not over 1000H from well head, where H is height of pyramids in meters. EFFECT: higher efficiency.
